CAMPUS MAP ..................................................................................................................... 153
Morehouse School of Medicine (MSM) is a private, relatively young, historically black institution with a compelling mission of great public value. Established in 1975 to recruit and train minority and other individuals from disadvantaged backgrounds, regardless of race or ethnicity, as physicians committed to the primary health-care needs of the underserved, the School’s academic stature and reputation have grown exponentially over the past three decades.

Today, MSM commands national attention for its uniquely nurturing campus environment and outstanding training programs in medicine, biomedical research and public health. Our strong emphasis on strengthening primary care, promoting prevention and early detection, and conducting research and translating discovery into community solutions and improved patient care that contributes to the elimination of health disparities, has made us a unique institution among disparities, has made us a unique institution among the nation’s academic medical centers.

MSM is widely recognized as a vital, irreplaceable resource, supporting the national resolve to create a healthier America. The content and context of our training programs, research endeavors, health-care services and community-based partnerships reflect our commitment to improving the health and well-being of vulnerable communities and eliminating the disproportionate burden of disease. Our successes continue to build on the strength of the School’s special mission – and our commitment to niche focused competencies and unqualified excellence.

Knowledge…Wisdom…Excellence…Service…These are the values articulated at the founding of our school, and they continue to guide and inform our work. When one enters the atrium of our beautiful Louis W. Sullivan National Center for Primary Care building, these words surround our seal that is embedded into the entry flooring. But more importantly, these words are found in the hearts of our faculty and staff – as they work with students and patients; they are in the minds of our scientists as they work in the research labs, and they are in the actions of every member of the MSM family as we serve our communities throughout metropolitan Atlanta and across the state and the nation.

Sincerely,

John E. Maupin, Jr., D.D.S., MBA
President
As the Dean and Executive Vice President, I am excited to be a part of such a well-respected academic institution where the Board of Trustees, the Board of Advisors, Faculty, Staff, Students, Residents, Researchers and Alumni are assisting to help eradicate health disparities and train health professionals in Georgia, our nation, and globally.

Born and raised in Macon, Georgia, I am a product of the educational system in the state. I am an example of its investment and success, but I’m also well aware of its need. The need to produce a diverse health professional workforce dedicated to ensuring that all citizens have equal access to health care and high quality care.

In fact, 15.2% of the population in the state of Georgia lives in designated primary care health professional shortage areas, compared to the national average of 11%. Georgia also ranks in the lower quartile for preventive services and the upper quartile for health risks.

There is a need to address health disparities in Georgia and Morehouse School of Medicine has the opportunity to be at the forefront of educating Georgians and becoming a catalyst for change. Morehouse School of Medicine is in a unique position of being an integrated member of the largest consortium of Historically Black Colleges and Universities in the world – The Atlanta University Center. This offers an opportunity to create collaborative scholars who will work together on cross-disciplinary challenges and help advance the continuum of bench-to-bedside science.

I would like to welcome each of you to Morehouse School of Medicine.

Together, we are on a mission!

Sincerely,

Valona Montgomery Rice

Dean & Executive Vice President

* Morehouse School of Medicine is accredited by the Commission on Colleges of the Southern Association of Colleges and Schools to award doctorate and master degrees. Contact the Commission on Colleges at 1866 Southern Lane, Decatur, Georgia 30033-4097 for questions about the accreditation of Morehouse School of Medicine.
MISSION STATEMENT

Morehouse School of Medicine is dedicated to improving the health and well-being of individuals and communities; increasing the diversity of the health professional and scientific workforce; and addressing primary health care needs through programs in education, research, and service, with emphasis on people of color and the underserved urban and rural populations in Georgia and the nation.
CORE VALUES

Knowledge: continuously creating, acquiring and communicating science based information to better understand and enhance the human condition.

Wisdom: encouraging, promoting and supporting the exchange of knowledge and experiences to cultivate insight, discernment, and good judgment in our scholarly, service, and administrative endeavors.

Excellence: consistently achieving the highest level of performance and upholding the highest standards of ethical behavior while taking individuals and collective responsibility for our actions and outcomes.

Service: maintaining an environment that exceeds expectations, holds every individual in high regard and esteem, and treats all patients and clients with compassion and empathy.

VISION

Morehouse School of Medicine will be known as the nation’s leading community-focused, research-driven, student-centered medical school, recognized for its:

- Pre-eminence in the conduct of research and translation of discovery into community solutions and improved patient care that contributes to the elimination of health disparities;
- Model educational environment that nurtures and supports the achievement of academic excellence;
- Leadership in creating models and best practices of integrative, culturally competent and community-empowered health and health care; and
- Significant contributions to the diversity of the health-care and scientific workforce and the development of leadership committed to improving the health of vulnerable populations and the nation’s health-care system.

Morehouse School of Medicine
HISTORY

Established in 1975 at Morehouse College as a two-year medical education program with clinical training affiliations with several established medical schools for awarding the M.D. degree, Morehouse School of Medicine (MSM) separated from Morehouse College in 1981 as an independently chartered institution. Over the ensuing years, MSM has evolved into one of the nation’s leading community-based, primary care oriented, health sciences institutions, offering graduate degrees in: Biomedical Sciences (Ph.D.), Clinical Research (M.S.C.R.), Public Health (M.P.H.), Biomedical Research (M.S.B.R.), and Biomedical Technology (M.S.B.T.).

MSM has seven accredited residency programs: Family Medicine (1981), Preventive Medicine (1986), Internal Medicine (1991), Psychiatry (1991), Surgery (1993), Obstetrics and Gynecology (1997), and Pediatrics (2000). The majority of MSM patient care and clinical training occurs at Grady Memorial Hospital, one of the largest public hospitals in the Southeast. The school’s research stature and reputation have grown exponentially over the past decade.

In 2008, MSM ranked number three among the nation’s community-based medical schools in research funding from the National Institutes of Health and among Georgia’s four medical schools, MSM ranks number two. Moreover, MSM ranks in the top five of U.S. medical school with five or more Institute of Medicine (IOM) members, based on the ratio of the IOM members faculty size.

*Morehouse School of Medicine is accredited by the Commission on Colleges of the Southern Association of Colleges and Schools (1866 Southern Lane, Decatur, Georgia 30033-4097; Telephone number 404.679.4501) to award the degrees Doctor of Medicine (M.D.), Doctor of Philosophy (Ph.D.) in Biomedical Sciences, the Master of Public Health (M.P.H.), and the Master of Science in Clinical Research (M.S.C.R.).
FACILITIES AND OTHER RESOURCES

Most of the instruction in the preclinical courses for the MD program at MSM occurs in a 91,000 square foot facility that was constructed in 1982. The Hugh M. Gloster Basic Medical Sciences Building contains classrooms and laboratories, space for administration, faculty offices, an animal facility, and faculty research laboratories. There are 100 student capacity lecture halls, two multidisciplinary teaching laboratories (over 3,500 square feet for each) and a gross lab in this building. In 1987, construction of a 70,000 sq. ft. Medical Education Building that is attached to the Hugh M. Gloster Basic Medical Sciences Building was completed. The facility provided faculty office and research space and doubled the size of the library. This building also has group study rooms for students and a student lounge.

The Morehouse School of Medicine Library, physically located on the first floor of the Medical Education Building (MEB), provides information and learning resources for students, residents, faculty, staff, researchers, and the community. The Library houses open stacks of over 80,000 book and journal volumes, has areas for group and individual study, supports 24 hour Internet access to over 250 full-text electronic books and over 6,000 full text electronic journals, and is open 105 hours per week. Additional faculty offices, administrative offices, maintenance and repair shops, and central stores are contained in a second nearby, recently renovated structure of approximately 30,000 square feet.

In 1996, the School opened and dedicated a Multi-Disciplinary Research Center. It houses the Clinical Research Center, the Neuroscience Institute, and National Aeronautics and Space Administration programs. A research wing of the Medical Education Building opened in 2000 and houses the Cardiovascular Research Institute, Department of Pharmacology, Office of Sponsored Research Administration and the Division of Information Technology.

The National Center for Primary Care (NCPC) opened in 2002. The NCPC is a 106,000 square foot building on the campus of Morehouse School of Medicine, in the Atlanta University Center. The NCPC showcases a conference center with a 570-seat auditorium, large seminar room, small break-out rooms, and cafeteria for primary care and public health conferences. The Clinical Skills Laboratory within the NCPC is used to teach communication skills, as well as diagnostic and procedural skills, to students and practicing physicians. This facility, where our student have standardized patient experiences, has 12 simulation rooms, with 11 fully equipped like clinic rooms with cameras, microphones, video recording equipment, and a center teaching and monitoring area. This is adjacent to a 48 computer e-lab and small multipurpose classrooms. The building is the administration headquarters for NCPC leaders, researchers, and programs, and also home of the Masters in Public Health (MPH) Program, Preventive Medicine Residency Program, Faculty Development Program, and Center of Excellence on Health Disparities.

The Morehouse School of Medicine has affiliations with the following Atlanta hospitals for major clinical teaching and research: Grady Memorial Hospital and Children’s Healthcare of Atlanta at Hughes Spalding Hospital and at Scottish Rite Hospital, South Fulton Medical Center, and Atlanta Medical Center. There also exists an affiliation with the Central Alabama
Veterans Health Care System in Tuskegee Alabama, Ridgeview Institute and Georgia Regional Hospital-Atlanta.

Clinical instruction for medical students and for residents is conducted at affiliated facilities. Third-year students do the major portion of their clinical clerkships at Grady Memorial Hospital, full-service hospital committed to offer medical services to the underserved including governmentally-sponsored populations. The hospital has over 800 beds and over 200 outpatient clinics (including community-based clinics). In a given year, there are over 40,000 admissions and over 750,000 outpatient encounters. Through agreements with Fulton-DeKalb Hospital Authority, Morehouse School of Medicine and Emory University School of Medicine share the responsibility for patient care and MSM is responsible for the education of its medical students and residents at Grady Memorial Hospital.

Third-year psychiatry instruction and the psychiatry residency training program occur in a number of clinical facilities throughout the Atlanta area. The facilities include: Georgia Regional Hospital, Ridgeview Institute, West Fulton Community Mental Health Center, Grady Memorial Hospital, the Tuskegee Veterans Medical Center, and the Atlanta Medical Center. The Family Medicine Residency, at the MMA Comprehensive Family Healthcare in East Point, Georgia, is located approximately 10 miles from the medical school. Third and fourth-year instruction in Family Medicine occurs at this facility.

Morehouse Medical Associates (MMA), Inc. is a separately incorporated faculty practice plan, staffed by MSM clinical faculty. It currently operates from three sites. The Family Practice Clinic operates as a branch of MMA, and provides the patient-base for the Family Practice Residency program at the MMA Comprehensive Family Healthcare Center in East Point, Georgia. At Grady Memorial Hospital, in-patient and out-patient care are provided on departmental services and residency programs in Medicine, OB/GYN and Surgery. The major facility for in-patient Pediatrics care is Children’s Healthcare of Atlanta at Hughes Spalding Hospital. Private patients of our faculty receive hospital care at several Atlanta area hospitals. An essential part of MSM’s educational mission is providing our medical students, graduate students and clinical trainees with faculty role models who are pursuing state-of-the-art research. Moreover, it is our educational philosophy that health care facilities that care for the underserved must play a leadership role in translational research that brings advances in basic science and clinical medicine to these special populations. We are in the top quarter of newer medical schools in total NIH research funds and at the 80th percentile in funds per faculty member in the basic science departments.

Our research activities have resulted in the establishment of major research centers/institutes:

- The Cardiovascular Research Institute (CVRI) was established in July 1999 as a Center of Research Excellence under the direction of Dr. Gary H. Gibbons. The CVRI is funded in part by a grant from the NIH National Center for Minority Health and Health Disparities and the NIH Heart, Lung and Blood Institute program to develop cardiovascular research centers at Historically Black Colleges and Universities. The Institute is a multi-investigator, multi-disciplinary organization that transcends traditional academic departmental structures to focus on advancing cardiovascular research and education.
Established in 1995, the Morehouse School of Medicine Neuroscience Institute (MSMNI) has active research projects addressing the molecular biology and physiology of circadian rhythms, signal transduction and modulation in the basal ganglia, regeneration of CNS neurons, functional imaging, and neurotoxicity associated with HIV infection. The projects are supported by core facilities in imaging, molecular biology, tissue culture, and histology. Dr. Peter MacLeish is the Director.

The Center of Excellence on Health Disparities (CEHD) was formed in 2002, under the leadership of Dr. David Satcher, Director of the Center of Excellence on Health Disparities, Poussaint-Satcher-Cosby Chair in Mental Health, in response to MSM’s mission to improving the health and well-being of individuals and communities; increasing the diversity of the health professional and scientific workforce; and addressing primary healthcare needs through programs in education, research, and service, with emphasis on people of color and the underserved urban and rural populations in Georgia and the nation.

Established in 2002, the National Center for Primary Care (NCPC) is a national resource for encouraging doctors to pursue primary care careers, for making primary care practice more effective, and for supporting primary care professionals serving in underserved areas. The mission of the National Center for Primary Care is to promote excellence in community oriented primary health care and optimal health outcomes for all Americans, with a special focus on underserved populations and on the elimination of health disparities. The NCPC team provides training for primary care practitioners, conducts practice-based research to improve health outcomes, creates protocols and tools for improving primary care effectiveness, and undertakes policy analyses focused on how to make primary care more accessible and more effective.

The Clinical Research Center (CRC) was established in 1996 at Morehouse School of Medicine in order to provide the infrastructure necessary for faculty at MSM to conduct clinical research. It was the first freestanding outpatient research facility of its kind in the nation to receive accreditation by the Joint Commission on Accreditation of Health Care Organization. In addition to core resources in Biostatistics, Bionutrition, Analytical Laboratory, Ultrasound, Nursing and Participant Recruitment, the CRC also supports a training program leading to a Master of Science in Clinical Research. The Community Physicians’ Network extends the CRC’s community outreach to support community based clinical trials. Dr. Elizabeth Ofili is the Director.

In addition to these major research centers/institutes, we also have programs that support a significant portion of our research and infrastructure efforts.

The Research Centers in Minority Institutions (RCMI) program, funded continuously since 1986, provides significant support for our state-of-the art biomedical research technology core and shared-use facilities. The MSM RCMI Program mission is to provide the infrastructure, expertise, and atmosphere to enhance the process of biomedical research, developing our expertise in molecular, cellular, systems, organismal, and population approaches. This will provide a foundation for understanding the healthy state in humans, and allow investigation into the cause and treatment of important health problems, focusing on those that impact underserved populations. Dr. Vincent C. Bond is the Director.
The Minority Biomedical Research Support (MBRS) program provides funds to support continuous research excellence, strengthen the institution’s research capabilities, and provide opportunities for students to work as part of a research team. Dr. Sandra Harris-Hooker is the Director.

In support of the mission of MSM, the faculty has developed a wide variety of initiatives to promote the health of members of our community, state, and nation. Among these initiatives are breast and cervical cancer screening programs, the Gerontology Program and Resource Center, the Health Promotion Resource Center, the Parent Training Network, the Cancer Prevention Awareness Program, the Prevention Resource Center, Student Sight Savers Program (SSSP) and other similar programs. The Partnerships for Health Professions Education project supports an interlocking series of efforts to increase the numbers of African American applicants to medical schools including the Ben Carson Summer Program, the Medical Post for high school students, the Vivien Thomas Summer Research Program, focused partnerships with selected Atlanta area schools, and summer enrichment programs. The commitment to improving rural health-care and supporting practitioners is addressed in our Area Health Education Centers (AHEC) and Health Education and Training Centers (HETC).

*Primary appointment in another department.

The Department of Community Health and Preventive Medicine focuses on training primary care physicians and public health professionals, particularly minorities, for careers in medically underserved communities and on improving health in these communities. The department provides future primary care physicians with the skills to analyze scientifically the health and health-care delivery problems of minority and underserved communities, and to understand the social, cultural, environmental and economic determinants of health and disease. As a bridge between local neighborhoods and the medical school, the department engages in research and service to improve the health of the communities of which it is a part.

At the graduate level, the department sponsors the Master of Public Health degree program and the Residency Program in Public Health and Preventive Medicine. In addition, the department offers postgraduate continuing education conferences and seminars on preventive medicine topics.

We think of the community as a “patient,” diagnosing health problems at the community level and working with the community to develop a treatment plan. We incorporate this approach into our educational programs so that the physicians and public health professionals we graduate will be able to address the needs of the underserved communities where they will practice.

The goals of the Department of Community Health and Preventive Medicine are:

• To conduct innovative programs of education, research, and service that focus on the special health problems of minority and other underserved populations, including those in the developing world.

• To conduct and strengthen a residency program that prepares specialists in public health and general preventive medicine.

To advocate for community and public policy measures that improves the health of underserved communities.
• To conduct projects that will improve the health of underserved people. It is expected that all members of the department will devote a portion of their time to community service.

• To establish relationships with other community agencies and organizations with similar goals.

• To increase the number of minority public health professionals through training in the Master of Public Health Program.

Centers for research and service in the Community Health and Preventive Medicine department include the Health Promotion Resource Center, the Prevention Research Center and the Center for Community Health and Service-Learning.

The Department of Family Medicine offers programs at all levels of medical education. At the medical education level, the department collaborates in Fundamentals of Medicine II and is responsible for the required junior Clerkship in Family Practice, and a variety of senior elective clerkships. An accredited three-year family practice residency program, based at South Fulton Medical Center, prepares the resident physicians for practice in underserved rural and urban communities. At the postgraduate medical education level, the department sponsors continuing education conferences and seminars on primary care topics, and a funded Faculty Development Program.

The Department of Family Medicine prepares residents and students to provide excellent comprehensive family health care with an emphasis on underserved and minority communities.

We believe in access to quality health care that stresses prevention and attention to the dignity, mental health, and spiritual health of all individuals and their families.

Our goal is to provide outstanding leadership in the provision of patient care, teaching, and research to improve the health status of families and their communities.

*Primary appointment in another department.

The Department of Medical Education was established in 1991. The activities of the department include coordination of interdisciplinary courses, participation in faculty development, curriculum and student evaluation, and provision of general support of the overall educational program.

The mission of the Department of Medical Education is to support the faculty and educational programs by making available resources to improve the educational environment aiding in the process of evaluation and assessment, guiding curricular development and review, teaching students and colleagues, and supporting faculty development and career advancement.

Faculty members in the department are actively involved in teaching and teaching administration. They are involved in leading the Fundamentals of Medicine 1, 2, and 3 sequence, coordinating the first-year curriculum, teaching pathophysiology and directing the Standardized Patient program and the Clinical Skills Center.

The Department of Medicine specializes in the provision of disease prevention, health promotion and care to the acutely and chronically ill adult. The department is actively involved in teaching clinical skills in the second-year and in the third-year clerkship in Medicine. A variety of clinical electives are available, including acting internship in Medicine, Medical ICU, and subspecialty experiences.

The Department of Medicine is the largest academic department in the medical school. It is comprised of the General Internal Medicine section and most of the recognized subspecialties of medicine: Cardiology, Pulmonary/Critical Care, Nephrology, Gastroenterology, Endocrinology, Rheumatology, Infectious Diseases, and Hematology/Oncology. In addition, the Department of Medicine includes Neurology.

Members of the department are actively involved in clinical service, both clinical and laboratory research, and the education of medical students and internal medicine residents. Our principal teaching and clinical venue is Grady Memorial Hospital where there is a shared medicine service with Emory University Department of Medicine.

Our Internal Medicine Residency Program earned full accreditation by the Residency Review Committee in 1998 and currently has 49 residents. There are approximately 35 active clinical research projects within the
department. These include both investigator initiated and contractual research. Funded basic science research is promoted and supported.

**Microbiology, Biochemistry and Immunology**

*Primary appointment in another department.

The Department of Microbiology, Biochemistry and Immunology is responsible for instruction of first-year medical students in biochemistry and of second-year medical students in medical microbiology and immunology. The department is responsible for instruction of PhD students in Microbiology, Biochemistry and Immunology. In addition to their teaching responsibilities, the faculty are involved in scientific research that is both well-funded by extramural sources and have been published in leading journals. The research also involves PhD students and postdoctoral fellows, as well as the research staff.

Research areas in biochemistry include: space medicine; molecular genetics, metabolism, cardiovascular biology, nutrition, signal transduction, and mechanisms of cellular proliferation. Research areas in microbiology and immunology include: the immunology of AIDS, mycology, molecular parasitology, sexually transmitted diseases (STD), pathogenic microbiology, the immunology of infection, molecular virology, the mechanisms of autoimmune diseases and psychoneuroimmunology. Faculty are also actively involved in several MSM research institutes and centers. They serve as members of local and national committees and as reviewers of journal articles and grant applications. The faculty also serve as mentors for PhD students, and are involved in community programs and tutorial services.
Neurobiology

*Primary appointment in another department.

The Department of Neurobiology participates actively in the preclinical education of students in the MD program through the Organ Systems 3 course. Faculty members participate in core instruction for the PhD in Biomedical Sciences program and in research mentoring.

Departmental faculty are actively engaged in biomedical research, and most of the faculty have extramural grants to support their studies. Additional research studies are carried out in a collaborative arrangement with investigators in other departments as well as at other institutions.

Departmental faculty are actively involved in the many research centers and institutes of MSM. Many members of the department are in the Neurosciences Institute. Research in this institute covers a broad range of cellular and molecular neuroscience including the molecular biology and physiology of circadian rhythm, neuroprotective effects of neuregulin, regeneration of CNS neurons, and functional imaging at the cellular level,
and other areas. Several members of the department serve on Standing and Ad Hoc committees at the medical school, in the community and with the federal government. Faculty members work with high school and undergraduate students from Atlanta area colleges and universities. They also serve as advisors and/or mentors for graduate students in the graduate PhD program and as thesis/dissertation committee members.

The Department of Obstetrics and Gynecology at Morehouse School of Medicine provides education and training in obstetrics and gynecology to medical students in clinical skills in the second-year course in Fundamentals of Medicine 2 and in the third-year Obstetrics and Gynecology clerkship. A variety of fourth-year electives, including acting internships is available. The department also has a four-year accredited residency in obstetrics and gynecology. Faculty also provide patient care at Grady Memorial Hospital in Atlanta, and private patient care in our office practice and other hospitals. Faculty are actively engaged in research in women’s health care.

Presently, the Department of Obstetrics and Gynecology is involved in a variety of clinics in Grady Memorial Hospital. They include: High Risk Obstetrics, Reproductive Endocrinology and Infertility, Continuity, Walk-In,
Dysplasia, Oncology, Teen, Perinatal referrals and consultations, Ambulatory Surgery, Breast and Gynecology, and Family Planning. In addition, there are two MSM Obstetrics and Gynecology community facilities and three Grady Satellite Clinics. In the area of research, the Department of Obstetrics and Gynecology received research grants for (a) Longitudinal Study of Lead Poisoning, which focuses on maternal-fetal cord blood lead levels, placental morphology and newborn neurodevelopment, (b) Pregnancy Prevention, which is directed towards education, clinical interventions and strategies to reduce teenage pregnancy, and (c) a National Institute of Health center grant for basic reproduction research jointly with faculty in the departments of Physiology and Anatomy. The department hosts the annual HeLa Women’s Health Conference, which promotes clinical research, didactic and continuing education.
The Department of Pathology seeks to utilize its activities in teaching, clinical service and research to further the understanding of causes, mechanisms of development, morphologic and functional effects and outcomes of disease states. Education is the primary objective of the department. Faculty members are very committed to quality education in the MD program through the second-year course in Pathology. Departmental faculty also participates in the education of graduate students, residents and practicing physicians. Areas of research focus include the eye, blood vessels and neoplasms.

The Department of Pediatrics has as its primary goal the development and provision of a curriculum in pediatrics that will furnish the students and residents with a broad view and knowledge of the types of problems encountered in a pediatric setting. Faculty are actively involved in teaching in the second-year clinical skills course Fundamentals of Medicine 2 and in the third-year clerkship in Pediatrics. The clerkship is a unique community-based experience in which the students rotate to a wide variety of settings for a comprehensive introduction to the spectrum of pediatric practice.

The department also has a unique community-based pediatrics residency that is fully accredited. In addition to primary care, the department also encourages the pursuit of careers in research and academic medicine. The environment in which these concepts of medicine are developed emphasizes concern and compassion for the patient, the patient’s family, and community. The practice setting for the faculty includes Children’s Healthcare of Atlanta at Hughes Spalding Hospital and at Scottish Rite Hospital, Grady Memorial Hospital, and Morehouse Medical Associates, MSM’s faculty practice plan.
The Department of Pharmacology and Toxicology provides educational programs for medical students and graduate students in the biomedical sciences. Faculty members teach in the required second-year course. The department offers study and research in a variety of pharmacological and toxicological sub discipline areas, including cardiovascular, ocular, biochemical, neural, molecular, immunological and environmental. All faculty members participate in teaching, research and institutional service activities.
The Department of Physiology provides educational programs for the first-year medical students and graduate students. Graduate students and postdoctoral research fellows are accepted to work on projects in the areas of reproductive endocrinology, gastrointestinal pathophysiology and host-parasite relationships, cardiovascular molecular biology, cardiac function, and cellular physiology. One core research facility, the imaging facility, is housed in the department and directed by a departmental faculty member.

Philosophy of the Department of Physiology

The Department of Physiology plays a key role in the education of first-year students in the MD program in the Medical Physiology course. Faculty also have key roles in graduate student education in the core curriculum, elective, and laboratory experiences. The department has as its primary goal imparting a background of basic physiological knowledge to medical and graduate students so that they may apply this information either to the practice of medicine or to the conduct of biomedical research. Departmental faculty members also have developed and maintained productive individual and collaborative research programs in a variety of areas, including cardiovascular physiology, reproductive endocrinology, and the pathophysiology of gastrointestinal infectious diseases. Faculty participate in MSM research institutes and centers, including the Cooperative Reproductive Science Research Center, the Cardiovascular Research Institute, and the Neuroscience Institute.

The Department of Psychiatry and Behavioral Sciences teaches and coordinates didactic courses for first- and second-year students in (normal) Human Behavior and Psychopathology, respectively, course streams within Fundamentals of Medicine 1 and 2. The department also has a required third-year clinical clerkship and senior clinical electives. The department sponsors an accredited residency in Psychiatry. These dynamic and comprehensive undergraduate and graduate medical education programs emphasize individual professional growth of each student and resident.

The department is committed to supporting the interface of psychiatry and primary care with an emphasis on working with the community and with the underserved. We emphasize quality patient care along with the pursuit of scholarly activity and meaningful research. The Cork Institute on Alcohol and Other Addictive Disorders, established in the department in the fall of 1985 with an endowment from the Joan B. Kroc Foundation, has the mission of serving as a leader in the areas of professional education about substance use and addiction among African-American and underserved populations.

The Department of Surgery provides comprehensive clinical education in general surgery for students and residents. The department collaborates in instruction of first-year students in Human Morphology. There is a third-year clerkship in surgery as well as fourth-year elective. The department sponsors an accredited surgery residency.

The focus of the department is to provide superior surgical care to patients, to train our medical students and our residents in the practice, art, and compassion of surgery, and to make the department a local, regional, and nationally recognized Department of Surgery with excellence in education and patient care. Our philosophy is to specifically address adversity issues in the surgery workforce. Our motto has been “a chance to make a difference, a tradition of excellence.” It goes without saying that the philosophy of the department is also to be a team player with the institution, joining with all facets of MSM in partnership to enhance, elevate, and to help MSM continue its very special mission. Departmental faculty are involved in breast cancer and other research as well as roles in national leadership in surgery and surgical education.
Admission Requirements and Procedures

The Committee on Admissions is responsible for the acceptance of all students entering the first-year class at MSM. Morehouse School of Medicine encourages applications from, and gives full consideration to, all applicants for admission and financial aid without regard to sex, race, handicap, color, creed, sexual orientation, gender identity, or national or ethnic origin. MSM is committed to recruiting, enrolling, and educating substantial numbers of persons from racial minorities and from educationally and socio-economically deprived groups. The Admissions Committee selects those applicants who are more likely, in its opinion, to become the best students and physicians and fulfill the mission of the school.

Accreditation

Morehouse School of Medicine is accredited by the Southern Association of Colleges and Schools (SACS). In 1998 and in 2005, Morehouse School of Medicine, following survey visits and reviews by the Liaison Committee for Medical Education (LCME), received full accreditation for additional periods of seven and eight years, respectively.

Selection Factors

The selection of students by the committee is made after careful consideration of many factors. Among them are intelligence, preparedness, motivation and aptitude. In the evaluation, account is taken of the candidate’s scores on the Medical College Admission Test (MCAT), evidence of academic achievement, the extent of academic improvement, balance and depth of academic program, difficulty of courses taken and other indications of maturation of learning ability. The Committee is also interested in the activities of the applicant outside of the classroom including the nature of extracurricular activities, hobbies, the need to work, research projects and experiences, evidence of activities that indicate concurrence with the school’s mission, and evidence of pursuing interests and talents in depth. Finally, the Committee looks for evidence of personal character and responsibility, compassion, honesty, motivation, and perseverance which, in the Committee’s opinion, indicate that the applicant shows promise of contributing to the advancement of the art, science, and practice of medicine after obtaining the MD degree. The Committee’s consideration of these factors is based on all components of the applicant’s file including letters of recommendation, the academic record, the supplemental application, and the interview if the latter is granted. Qualified residents of the State of Georgia will be given high priority. Students who have been dismissed from medical school will not be considered for admission. International applicants must have a permanent resident visa.

Entrance Requirements

Completion of the baccalaureate degree is required for admission to the MD program. The education of a physician is life-long. The years of formal schooling are only preparation for the self-education that a physician must continue throughout his/her professional life. Applicants are encouraged to have a broad educational background. No specific major is deemed superior to another. A major goal of undergraduate college work should be the development of the applicant’s intellectual talents and to provide for his/her overall development and maturation. The premedical studies required for admission are set in order to provide the student with a firm
grounding in subjects considered essential for the study of medical sciences, to provide the Committee on Admissions a means to evaluate aptitude for scientific work, and to determine interest in the sciences. The following courses must be included in undergraduate study:

- Biology w/laboratory (one year)
- General Chemistry w/laboratory (one year)
- Organic Chemistry w/laboratory (one year)
- Physics w/laboratory (one year)
- College level Mathematics (one year)
- English (including composition) (one year)

**One academic year equals either three quarters, two semesters; or one semester and two quarters.**

The Committee on Admissions prefers that the required premedical courses not be taken on a Pass/Fail basis, but that grades be received. The committee recommends that, if two or more introductory courses are offered by the undergraduate departments, the applicant take the more rigorous of the basic science courses.

An accepted student is responsible for completing all prerequisite course work prior to matriculation. It is understood that a student accepted by the school will be denied admission if he/she fails to complete all specifically required courses and to maintain a good record of scholastic performance and conduct during the period following acceptance.

All applicants are required to take the Medical College Admission Test (MCAT). Results of the test must be received by MSM before an applicant can be completely evaluated by the Committee on Admissions.

Applicants are strongly urged to take the test no later than the Spring of the calendar year preceding the year of entrance into the medical school so that the score can be considered early and the test can be taken again if improvements in performance are desired. Those who take the test at a later date may find themselves at a logistical, if not competitive, disadvantage in that the class may be filled, or largely so, before receipt of test scores. Applicants are not penalized for retaking the MCAT. Applications and information about the test may be obtained from college advisors or by writing directly to:

Medical College Admission Test  
The American College Testing Program  
P.O. Box 456  
Iowa City, Iowa 52243  
(319) 337-1357

For information see:  www.aamc.org/students/mcat/start.htm

Students accepted for admission must pay tuition and fees in accordance with MSM policy in order to enter. Students may apply for loans, scholarships, and grants in aid in order to meet these financial obligations. The ability to finance a medical education is not a factor in the selection of candidates for admission. However, the final responsibility for payments of fees and tuition and for the provision of living expenses lies with the
student. The School may require proof of financial resources before granting matriculation. Only U.S. citizens or international students holding a permanent resident visa are eligible for financial aid.

**Application Procedure**

Morehouse School of Medicine participates in the American Medical College Application Service (AMCAS) of the Association of American Medical Colleges. AMCAS is a centralized procedure for applying to any participating medical school with only one application and one set of official transcripts of academic work. Formal application for admission to the first-year class must be submitted through AMCAS. The AMCAS application for admission, common to all participating medical schools, is available online only at www.aamc.org. Applicants should follow the AMCAS menu.

For more information, applicants may call: (202) 828-0600
For information see: http://www.aamc.org/audienceamcas.htm

**Regular Admission**

Morehouse School of Medicine will accept AMCAS applications to the first-year entering class beginning June 1 of the year prior to enrollment. The deadline for having all required credentials into AMCAS is December 1 of the year prior to admission. (This is a receipt date, not a postmark date.) AMCAS applications received after December 1 will not be forwarded to MSM.

Upon receipt of the application from AMCAS, the Admissions Office identifies qualified applicants and invites them to submit the MSM online supplemental application. Communication with applicants at this stage of the application process is usually by email. The non-refundable $50.00 application fee is collected online with submission of the online supplemental application. The methods of payment are Visa, MasterCard or electronic check. The electronic check payment option is available up to eight (8) days prior to the supplemental deadline date, which is usually the first Friday in January. See the online application instructions for the exact date. Applicants are encouraged to submit materials well in advance of the deadline to allow sufficient time for receipt of all materials requested and to resolve any logistical problems that may occur prior to the deadline.

Three (3) individual letters of recommendation, preferably from science faculty who have taught you, or a pre-medical committee composite letter of recommendation are required to complete the application. Once all supplementary materials are received and the application is complete, the applicant’s admission credentials are reviewed and evaluated. Selected applicants are invited for a personal interview. Following the interview, if granted, final decisions are made by the Committee on Admissions. Decision notifications begin in November and continue until the class is filled.

**Early Decision Admission**

This is an optional program for the applicant whose first-choice school of medicine is MSM and who desires an admission decision by October 1st. To receive this special consideration the applicant must:
1. Submit an AMCAS application as an Early Decision applicant to Morehouse School of Medicine (You will be restricted from applying to any other medical schools until Morehouse reaches a decision) We strongly advise applicants considering applying as an Early Decision applicant to seek advice from the Director of Admissions in advance;

2. Be a resident of the State of Georgia

3. Present an academic program of a minimum of 90 semester/135 quarters hours that indicates completion or plans for completion, of all courses required for admission

4. Have a superior academic record and correspondingly strong scores on the MCAT

5. Submit all required credentials to AMCAS by August 1

6. If invited, appear for a personal interview on a mutually convenient date prior to October 1 and,

7. Accept a position in the class, if offered one.

The AMCAS Application for Admission contains complete instructions regarding the Early Decision Program.

**Personal Interview**

After all application materials have been received, the completed application is screened for possible interview. The Committee on Admissions would like to interview every applicant who passes the initial evaluation screening process, but since this involves thousands of applicants, that is not possible. Only those students who, on the basis of application data, appear to merit serious consideration for admission are selected for interviews. Approximately 8% of all applicants will be invited to MSM for an interview. Invitations for interviews are by email and in writing, and the Admissions Office schedules all appointments. The interview is at the applicant’s expense.

**Non-Disclosure Policy**

Morehouse School of Medicine’s policies applying to the disclosure of information on student records are consistent with federal and state regulations. Applicants should be aware that letters and statements of recommendation or evaluation are prepared, submitted, or retained with a documented understanding of confidentiality and are not subject to inspection by applicants. To ensure that the confidentiality of materials in each applicant’s file is protected members of the Admissions and Student Affairs Office staff will not divulge over the telephone, or in writing, information regarding a decision on an applicant. One exception to this rule is that, if written consent is given, the Admissions Office may inform the student’s premedical advisor of action taken on the application by the Committee.

**Accepted Applicants**

Upon notification of an offer of acceptance for admission to MSM, the applicant is required to submit a letter of intent. The applicant must respond to the offer of admission within two weeks. An extension of this deadline may be granted upon written request by the applicant. A $100 reservation deposit (certified check or money
order only) is required with the acceptance of the offer. If the accepted applicant withdraws from the class with written notification to the Admissions Office prior to May 15, the deposit is refunded.

**Transfer Students**

Transfer admissions are rare. However, applications are accepted from students in LCME accredited U.S. and Canadian schools of medicine, who are in good academic standing, have the full approval of the dean of their current school, and have a cogent reason for requesting transfer. Admission is contingent upon space availability therefore, academically qualified applicants can still be denied admission due to lack of space.

**Former Medical Students**

Students are not considered for admission who have previously matriculated in medical school and have been dismissed for academic or disciplinary reasons.

**Objectives of the MSM Medical Curriculum**

Morehouse School of Medicine, a historically black institution established to recruit and train minority and other students as physicians, biomedical scientists, and public health professionals committed to the primary healthcare needs of the underserved, has a primary goal to provide an academic environment that acknowledges education as the primary function of the institution that supports and promotes lifelong learning as a foundation for excellence in clinical practice, biomedical science, and public health practice. A major objective of the undergraduate medical program is to graduate students who are competent, caring, effective healthcare practitioners.

The undergraduate medical program requires that candidates for the MD degree acquire certain knowledge, skills, and attitudes that are essential for functioning in a broad variety of clinical situations. To render a wide spectrum of primary care, a graduate must develop:

1) A mastery of the concepts necessary for the prevention, diagnosis, treatment, and management of common medical problems, including the ability to:

   a) Explain the normal development, structure and physiologic function of the body, organ systems, tissues, and cells, and their interrelationships
   b) Identify the molecular, biochemical, cellular, and physiologic mechanisms that are important in maintaining the body’s homeostasis
   c) Differentiate the biochemical, immunologic, pharmacologic, and microbiologic principles related to issues of disease, laboratory tests, and therapeutics
   d) Distinguish the various etiologies (genetic, developmental, metabolic, toxic, iatrogenic, microbiologic, autoimmune, neoplastic, degenerative, and traumatic) of diseases (pathogenesis), the associated altered structure and function (pathology and pathophysiology) and characteristic pathologic and laboratory manifestations
   e) Relate common epidemiologic and risk factors for diseases and the role and impact of psychological, behavioral, social, sexual, economic, and cultural factors on health and disease
   f) Explain the ethical, legal, and economic issues that impact health and medical care
2) Basic skills, including the ability to:
   a) Perform and record a complete and accurate health history, sensitive to patient needs and the nature of the situation
   b) Perform and record an accurate and complete physical examination, sensitive to patient needs and the nature of the situation
   c) Develop an appropriate diagnostic and therapeutic plan, appropriately using information resources, laboratory and imaging testing
   d) Communicate (in writing and orally) effectively and respectfully with peers, faculty, colleagues, and other members of the health care team, understanding the role of consultations and referrals
   e) Communicate with patients in an effective, respectful, and compassionate manner, including counseling them on risks, prevention, lifestyle and therapy issues
   f) Analyze the medical literature and other information resources to address medical questions and to sustain professional growth
   g) Apply techniques of population health, including methods of analysis of the health and health problems of defined populations and development of interventions to improve the health of populations

Throughout training, a candidate must demonstrate medical professionalism including ethical behavior, moral reasoning, honesty, integrity, dependability, and commitment to service.

Students who complete the undergraduate medical education program obtain an unqualified medical degree. The students must pass: 1) all courses in the undergraduate medical curriculum to acquire essential knowledge and develop skills needed for competent medical practice, and 2) two certifying medical licensure examinations (USMLE, Steps 1 and 2-CK and CS).

Medical education requires that the accumulation of scientific knowledge be accompanied by the simultaneous acquisition of skills and professional attitudes and behavior. Thus, in addition to academic requirements, technical standards have been established for admission and graduation from Morehouse School of Medicine. These standards are published in the student handbook and define aptitude, abilities and skills in the following areas: observation, communication, motor coordination of function, conceptual, intellectual-conceptual, integrative and quantitative abilities, behavioral and social attributes.

Due to the unique mission of the institution, particular effort is made to promote graduate education in primary care areas. In this regard, another objective of the undergraduate program is to have the majority of graduates choose residency training in primary care specialties. Through training sites in rural and inner city areas, students also discover the special needs of patients in those areas that are historically underserved with regard to physician care. Through achievement of these objectives, graduates of the MD program will be equipped to: 1) enter and complete programs of graduate medical education, 2) qualify for medical licensure, and 3) provide competent, sensitive medical care. In addition, they should have acquired the motivation and skills necessary for continued learning and for understanding the evolving primary healthcare needs of underserved patient populations.
Technical Standards for Medical School Admissions and Graduation

Medical education requires that the accumulation of scientific knowledge be accompanied by the simultaneous acquisition of skills and professional attitudes and behavior. Medical school faculties have a responsibility to society to matriculate and graduate the best possible physicians, and thus, admission to medical school has been offered to those who present the highest qualifications for the study and practice of medicine. Technical standards have been established as prerequisites for admission to and graduation from MSM. All courses in the curriculum are required in order to develop essential skills required to become a competent physician.

Graduates of medical school must have the knowledge and skills to function in a broad variety of clinical situations and to render a wide spectrum of patient care. Morehouse School of Medicine acknowledges Section 504 of the 1973 Vocational Rehabilitation Act and PL 101-336, the Americans with Disabilities Act (ADA), but ascertains that certain minimum technical standards must be present in the prospective candidates.

A candidate for the MD degree must have aptitude, abilities, and skills in five areas: 1) observation, 2) communication, 3) motor, 4) conceptual, integrative and quantitative, and 5) behavior and social. Technological compensation can be made for some handicaps in these areas, but a candidate should be able to perform in a reasonably independent manner.

- Observation necessitates the functional use of the sense of vision and other sensory modalities. The candidate must be able to observe demonstrations and participate in experiments in the basic sciences. The candidate must also be able to observe a patient accurately at a distance and close at hand.

- Communication includes not only speech, but reading and writing. A candidate must be able to communicate effectively and sensitively with patients and all members of the healthcare team.

- Candidates should have sufficient motor functions to elicit information from patients by palpation, auscultation, percussion, and other diagnostic maneuvers. A candidate should be able to do basic laboratory tests, carry out diagnostic procedures, and read EKGs and X-rays. A candidate should be able to execute motor movements reasonably required to provide general care and emergency treatment to patients. Such actions require coordination of both gross and fine muscular movements, equilibrium and functional use of the senses of touch and vision.

- Intellectual, integrative and quantitative abilities include measurement, calculation, reasoning, analysis, and synthesis. Problem solving, the critical skill demanded of physicians, requires all of these intellectual abilities. In addition, the candidate should be able to comprehend three-dimensional relations and to understand the spatial relationships of structures.

- Candidates must possess the behavioral and social attributes required for full use of their intellectual abilities. The exercise of good judgment, prompt completion of all responsibilities attendant to the diagnosis and care of patients, and the development of mature, sensitive, and effective relationships with patients are important. Candidates must be able to tolerate physically taxing workloads and to function effectively when stressed. They must be able to adapt to changing environments, to display flexibility, and to learn to function in the face of uncertainties inherent in the clinical problems of many patients. (Adopted from the College of Medicine at the University of South Florida Technical Standards.)
**Learning Communities**

Students in the MD program are placed in longitudinal learning communities at the start of first year. These four learning communities (Knowledge, Wisdom, Excellence, and Service) are linked to curricular elements in the Fundamentals of Medicine course series. Led by faculty mentors, these communities have both curricular and extra-curricular roles. Through participation in these communities, students address competencies in teamwork, communication, professionalism, and life-long learning skills. These communities foster peer-to-peer and near peer mentoring as well as assuring mentoring by faculty.

**Curriculum**

The educational program offered by Morehouse School of Medicine which leads to the Doctor of Medicine (MD) degree, focuses both on scientific medicine and on meeting the primary healthcare needs of patients who are underserved. Most of the first and second-year classes are offered in the Hugh Gloster Basic Medical Sciences Building on the main campus. Clinical experience begins in the first-year with clinical preceptorships in private offices. Clinical experience is continued in a state-of-the-art clinical skills training lab located in the National Center for Primary Care located on the main campus. Learning through community service is also an element of the first-year curriculum. In addition, clinical preceptorships in health clinics and physicians’ offices are part of the educational program. The entire first-year curriculum extends over ten and one/half months.

Students may elect to participate in the five year program or may be directed to do so on the basis of performance. This decelerated curriculum allows three years to complete the first two years of the basic sciences curriculum. The second-year of the curriculum begins in mid-August and concludes with the United States Medical Licensing Examination, Step 1 (USMLE, Step 1). The ten-month curriculum includes course work in clinical medicine taught in affiliated hospitals and clinics.

The academic schedule for the third year begins in early August and ends in late July. During this twelve-month period, students must complete all of the following clerkships: Surgery, Family Medicine, Psychiatry, Internal Medicine, Pediatrics, Obstetrics and Gynecology, and a longitudinal full year course, Fundamentals of Medicine 3.

The academic schedule for the fourth year begins in early August and ends in late April. During this nine-month period, students must complete the remaining required course, the Senior Selective. The MD Curriculum and Evaluation Committee has decided that MSM acting internship programs or ICU electives satisfy the requirement. Some ambulatory rotations, including Rural Primary Care, may also satisfy the requirement. Students must complete an additional 6 electives, of which 4 must be clinical electives. The electives program, which must be approved for each student in order to ensure a balanced program, may include electives at other LCME accredited medical schools.

First-Year Course Descriptions

MEDI 530-533 Molecules, Structures, Mechanisms Curriculum (40 hours)
Molecules, Structures, and Mechanisms is an integrated curriculum across the first-year that combines classroom, lab, small group, and self-directed study to cover the basic principles of biochemistry, physiology, and anatomy in an organ-systems organization. The course is organized into four units:

<table>
<thead>
<tr>
<th>Course</th>
<th>Semester Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basic Principles (Unit 1)</td>
<td>(10 hours)</td>
</tr>
<tr>
<td>Organ Systems 1 (Unit 2)</td>
<td>(10 hours)</td>
</tr>
<tr>
<td>Organ Systems 2 (Unit 3)</td>
<td>(10 hours)</td>
</tr>
<tr>
<td>Organ Systems 3 (Unit 4)</td>
<td>(10 hours)</td>
</tr>
</tbody>
</table>

Within these units, core themes of biochemistry, histology and cell biology, embryology, physiology, gross anatomy, neurobiology, and normal behavior are integrated. The overarching theme is normal human biology. Curriculum Director, Brenda Klement, PhD.

MEDI 530 Basic Principles of Human Biology (10 Credit hours)
This course presents the core principles of biochemistry, cell structure and biology, basic embryology, and basic cellular physiology. The following topics are presented: structures of biological compounds, pH and buffers, protein structure, hemoglobin and myoglobin, enzyme kinetics and mechanisms, intermediary metabolism and regulation, bioenergetics, cellular physiology, organization and structure of cells, and basic tissue types. July-September, Course Director: Bill Roth, Ph.D. (letter grade)

MEDI 531 Organ Systems 1 (10 Credit hours)
Building on the content of basic principles, this course presents an integrated introduction to structure and function of the organ systems. This course includes musculoskeletal (with emphasis on back and upper extremity), cardiovascular, respiratory, and gastrointestinal systems, including histology, embryology, gross
anatomy, and physiology. Instructional methods include lecture, gross lab, demonstrations, problem sessions, case-based, and self-directed study. September-December, Course Director: Lawrence Wineski, Ph.D. Prerequisite—Completion of MEDI 530. (letter grade)

MEDI 532 Organ Systems 2 (10 Credit hours)
Building on the content of Organ Systems 1, this course continues instruction in histology, embryology, physiology and gross anatomy of the organ systems, continuing with renal, endocrine, gonadal/pelvic (with lower extremity), hematologic and other systems. Instructional methods include lecture, gross lab, demonstrations, problem sessions, case-based and self-directed study. January-March. Course Director: Sridaran Rajagopala, Ph.D. Prerequisite—Completion of MEDI 531. (letter grade)

MEDI 533 Organ Systems 3 (10 Credit hours)
This course completes the first year Organ systems sequence with head, neck and nervous systems. The basic anatomy and physiology of the central nervous system are integrated in this course. The major portion of the course is organized by systems, i.e., sensory (e.g., visual, auditory), motor, limbic and autonomic. In the laboratory, gross and microscopic sections of the brain and spinal cord are studied and head and neck are dissected. March-May. Course Director: John W. Patrickson, PhD Prerequisite—Completion of MEDI 532. (letter grade)

MEDI 509 Community Health (4 credit hours)
This unique, community-based course minimizes lectures, relying primarily on a format of assigning students to small interdisciplinary groups that pursue health promotion activities in inner city communities in Atlanta. In the fall semester, students analyze the health problems of their designated community, and develop and present policy recommendations to faculty and the center staff. In the spring, students develop health promotion interventions to address the community needs previously identified. Course Director: Ayanna Buckner, MD, MPH and Associate Course Director, Ijeoma Azonobi, MD, MPH (September–May) (letter grade)

MEDI 511 Fundamentals of Medicine 1 (7 credit hours)
Fundamentals of Medicine 1 is a first-year course sequence that combines the courses, Clinical Preceptorship, Human Values 1, Human Behavior, and Epidemiology and Biostatistics into a year-long inter-disciplinary sequence. This sequence introduces students to the health care system, primary care practice, core clinical skills, ethics, aspects of normal human behavior, communication skills, and principles of biostatistics and epidemiology. The course sequence integrates clinical areas to enhance the student’s development and retention of core knowledge and skills in these areas. This course is interdisciplinary with core faculty from Medical Education, Community Health, Family Medicine, and Psychiatry. This course also links to our learning community experiences. Course sequence director: Martha Elks, MD, PhD: Course Directors Martha Elks, MD, PhD, Ayanna Buckner, MD, Ruth Shim, MD, Karia Kelch-Oliver, PhD (July–May) (letter grade)
Clinical Preceptorship Component
For most students, the Preceptorship Program is a student’s first exposure to patient care. This experience allows students to view the practice of medicine and the healthcare system through the eyes of both the physician and the patient. The component helps students learn to develop empathetic patient relationships. Students experience the practice of primary care medicine in several different urban and rural settings involving Family Practice, Internal Medicine, Pediatrics and Obstetrics and Gynecology. The recognition of community problems is stressed as well as the support systems available to approach these problems. Course Component Director: Ayanna Buckner, MD

Epidemiology and Biostatistics Component
This course covers methods including epidemic investigations, study design, Bayes, Theorem, and hypothesis testing. Instructional methods include lecture, discussion, problem solving, and computer-based tutorials. The course includes computer-based tutorials. Course Component Director: Martha Elks, MD, PhD

Human Behavior Component
This course sequence covers the human life cycle from birth to death, with a focus on normality and adaptive behavior. It includes historical evaluation of psychiatric nomenclature and the efforts to define with increasing precision deviation from normality. Course Component Directors: Ruth Shim, MD, Karia Kelch-Oliver, PhD

*Pass/Fail Course

Second-Year Course Descriptions

MEDI 600 Pathophysiology (7 credit hours)
This is a two-semester course designed not only to cover the pathophysiological mechanisms of disease, but also to develop the students’ clinical reasoning abilities. It is intended to be a year-long board review and, as such, integrates the basic sciences with clinical topics. The course is taught in case-based format where student participation and initiative are crucial to success. Student evaluation is based on performance on board-type multiple choice examinations and class participation. Course Director: Janice Herbert-Carter, MD (October-May) (letter grade)
MEDI 601 Nutrition (1 credit hour)
This course is designed to increase student understanding of the basic nutritional principles needed for general patient care. Course content includes: nutritional assessment and support; diet and disease trends; nutritional disorders. Course Director: Marjorie Smith, MD (August-December) (Pass-fail)

MEDI 602 Medical Microbiology and Immunology (7 credit hours)
This course covers all of the agents of infectious diseases, the nature of the infections they cause, host responses and the natural and clinical defenses against infectious diseases. The goal of this course is to provide the student sufficient conceptual and practical knowledge of Medical Microbiology and Immunology to enter clinical training or preparation for more advanced study of infectious diseases. Prerequisite: Satisfactory completion of the first-year undergraduate medical education curriculum. Course Director: Michael Powell, PhD (August-May) (letter grade)

MEDI 603 Medical Pharmacology and Toxicology (7 credit hours)
Medical Pharmacology and Toxicology is a course for second-year medical students and graduate students. The course lectures include: introduction to the principle of pharmacokinetics (how the body acts on the drug) and pharmacodynamics (how the drug acts on the body) and a survey of major classes of therapeutic agents with emphasis on their mechanism(s) of action and therapeutic use(s), adverse effects and drug interactions. The department also incorporates lectures, small group-sessions (patient-oriented problem solving; peer assisted learning), case studies, clinical correlation conference and objective-based examinations into the course. Prerequisite: Satisfactory completion of medical courses in biochemistry and physiology. Course Director: Evan Williams, PhD, Ward Kirlin, PhD, (August-May) (letter grade)

MEDI 606 Pathology (12 credit hours)
This is a required course for medical students. It introduces the student to the study of disease and serves as a bridge between the basic and clinical sciences. The first part of the course covers general processes in pathology that are common to many diseases, including cell and tissue reactions to injury, neoplasia, and non organ-specific disorders such as genetic diseases, immune diseases, environmental disorders, infections, and nutritional diseases. The remainder of the course involves discussions of organ-specific disease states (systemic pathology). Specifically, the course covers causes, pathogenetic mechanisms, morphologic and functional effects of diseases, and relates these to the patient in terms of prevention, diagnosis, natural history, course and prognosis. The course also incorporates principles relating effective use of the clinical laboratory in the diagnosis of selected diseases. An important aspect of the course is the introduction to the language of medicine and correct use of medical terminology. Teaching methods include lectures, simulated clinical case discussions, and laboratory sessions utilizing computer-simulated cases, fixed gross specimens, glass slides, color prints and transparencies. The case simulations allow the student to correlate clinical information with the morphology. These case vignettes also allow the student to begin to organize clinical data from various sources in order to solve clinical problems and strengthen skills in clinical reasoning. Prerequisite: Satisfactory completion of Medical School courses in Human Morphology, Biochemistry, Neuroscience, and Medical Physiology. Course Director: Marjorie Smith, MD (August-May) (letter grade)
MEDI 611 Fundamentals of Medicine 2 (7 credit hours)
This course includes Introduction to Patient Care (IPC), Physical Diagnosis, Human Values 2, and Psychopathology components. This course builds on the understanding of the doctor-patient relationship and interviewing skills. Large group meetings are held in the Fall for discussion, demonstration, and practice of the physical examination. For the remainder of the year, students are divided into small groups under the direction of the clinical faculty for the study of medical history-taking, physical examination, and the oral and written patient presentation. Individual patient assignments on the medical wards are supplemented by small group sessions. Course Director: Martha Elks, MD, PhD; Pediatrics Director, David Levine, MD; Gynecology Director, Jamil Harp, MD (August-May) Psychopathology Director: Ruth Shim, MD, Karia Kelch-Oliver, PhD (letter grade)

Human Values 2 Component
Human Values II builds on Human Values I in presentations, discussions and group presentations, with an emphasis on cultural competence, cultural appreciation, domestic and other violence, and personal and family impacts of death. Course Director: Martha Elks, MD, PhD

Psychopathology Component
Students are introduced to techniques of psychiatric and psychological assessment, to the most common psychiatric disorders and emergencies, to crisis intervention, and to psychopharmacology. A survey of the relationship of psychiatry and the applied behavioral sciences of other disciplines and specialties is provided. Medical students should become sensitized to a variety of social and cultural problems infringing on patients and physicians in receiving and delivering healthcare services, such as sexual dysfunctions, substance abuse, sexism, racism, and poverty. Prerequisite: Satisfactory completion of Fundamentals of Medicine I. Course Sequence Director: Quentin Ted Smith, MD (January-March)

**Third-Year Course Descriptions**

**MEDI 700 Third Year Clerkship in Internal Medicine (10 credit hours)**
Students spend a two-month rotation on the medical inpatient services of Grady Memorial Hospital and the Atlanta VA Medical Center. The students collect the database, formulate the problem list, devise the initial plans and follow each patient in a problem-oriented fashion. To a large extent the students have primary responsibility for their patients, working under the close supervision of house staff and faculty. Under the direction of house staff, students will work as an integral member of a service team consisting of an attending faculty member, senior resident, two interns and another student. Each student makes rounds, presents patients to the attending faculty, and takes calls every fifth night. Each student completely works up two or three new patients per week during the two-month rotation. Student goals are to learn how to collect data, identify and define individual components and clarify their relationship to each other, apply pathophysiologic principles to the clinical setting, organize problems for solution and follow them systematically through to their resolution. Course Director: Marvin L. Crawford, MD (July-July) (letter grade)

**MEDI 702 Third Year Clerkship in Obstetrics and Gynecology (10 credit hours)**
Obstetrics and Gynecology spans the entire age range of the female patient and is extensively health-oriented with emphasis on prevention of illness and on surgical and obstetrical techniques. Students participate actively in the prenatal, intrapartum and postpartum care of normal and abnormal obstetrical patients. They are actively involved with the diagnosis and treatment of minor and major gynecological problems in the outpatient department and on the hospital wards. Students are also exposed to the different obstetrical and gynecological subspecialties, including maternal fetal medicine, oncology, reproductive endocrinology and infertility. Course Director: Jamil Harp MD (July-July) (letter grade)

**MEDI 703 Third Year Clerkship in Pediatrics (10 credit hours)**
Oriented to Primary Care Pediatrics in medically underserved settings, this required clerkship features a three-week ambulatory placement in a community private practice or a Kaiser or Wellstar Office. The inpatient section of the course includes a two-week rotation at Children’s Healthcare of Atlanta at Hughes Spalding or Scottish Rite and a one-week service in Neonatology at Gwinnett Medical Center. Finally, there are two community/subspecialty weeks where students spend time in either subspecialty offices or clinics. There are also two half-days weekly for case discussions, computer based clinical simulations, and other classroom activities. The clerkship is largely based on a national curriculum developed by the Council on Medical Student Education in Pediatrics and the Ambulatory Pediatrics Association. Clerkship Director: David A. Levine, MD (July-July) (letter grade)

**MEDI 704 Third Year Clerkship in Psychiatry (9 credit hours)**
This is a seven-week rotation during the third year. Emphasis is on the clinical application of principles of psychiatry and aberrant behavior learned in the first two years. Students are assigned rotations at Ridgeview Institute, a psychiatric service facility; The Atlanta VA Medical Center, an in/outpatient hospital; Georgia
Regional Hospital/Atlanta, a public psychiatric facility; and Peachford Behavioral Healthcare System, a psychiatric and addictive disease treatment inpatient hospital. Atlanta VA and Georgia Regional Hospital offer a broad spectrum of psychiatric disorders in both inpatient and outpatient settings. Clinical responsibilities include performing admission histories and psychiatric examinations, formulating psychodynamic aspects of the case, psychiatric differential diagnosis and actively participating in the psychotherapeutic and psychopharmacologic treatment and management of patients. Students attend and participate in rounds and ward teaching conferences. Students also participate in group therapy to gain further insight into the psychiatric problems of patients and their families. A clinical case teaching conference is held weekly with an attending physician to demonstrate interview techniques, discuss differential diagnosis, and to allow for in-depth discussion of psychodynamics of selected patients. A lecture series addresses clinical aspects of the diagnosis and treatment of the major psychiatric disorders. Some selected topics are interviewing skills, emergency psychiatry, behavioral medicine, psychopharmacology, suicide, substance abuse, and forensic issues. Prerequisite: Promotion to the third year. Course Director: Quentin T. Smith, MD (July-July) (letter grade)

MEDI 705 Third Year Clerkship in Surgery (10 credit hours)
Third Year Clerkship in Surgery is a required eight-week rotation offered for all students who successfully complete all Basic Science requirements. The rotation is under the guidance of Morehouse School of Medicine, Department of Surgery’s clinical faculty at Grady Memorial Hospital. Emphasis is on the use of basic science principles, while developing clinical diagnosis and management skills. Students are expected to participate fully in the diagnosis, treatment, and management of patients on the surgical teams, including in-house call. Didactic lectures, conferences and rounds are mandatory. Participation in the operating room is under the supervision of residents and faculty attending. Mini rotations in pediatric surgery, urology, and otorhinolaryngology give students subspecialty experience. Students participate in a suture workshop during the first week of the Clerkship. The didactic lectures/ workshops will cover General Surgery and its subspecialties. MCQ computer administered exams are given as a part of the student evaluation. Interim Course Director: W. Lyn Weaver, MD (July-July) (letter grade)

MEDI 707 Third Year Clerkship in Family Medicine and Rural Health (10 credit hours)
The Family Medicine clerkship is a required eight-week clerkship. It is designed to meet the educational objectives in Family Medicine, Pediatrics, and Obstetrics and Gynecology. The student will have the opportunity to evaluate acute and chronic medical problems that frequently occur in the community. Even though the emphasis is on the development of effective clinical skills in the ambulatory patient care setting, experiences in the direct care of patients on family medicine hospital services, including labor and delivery, are also provided. Students are assigned a prenatal patient and expected to participate in delivery. Sites may include the Morehouse Medical Associates Family Medical Center and Comprehensive Family Healthcare Center, the offices of practicing family physicians, community health centers, and South Fulton Medical Center/Atlanta Medical Center – two merged hospitals -- where students serve as sub-interns. Providing healthcare for senior citizens, adolescents, and obstetrical patients is strongly emphasized. Course Director: Dolapo Babalola, MD (July–July) (letter grade)
MEDI 711 Fundamentals of Medicine 3 (2 credit hours)
This is a year long inter-disciplinary/multi-disciplinary seminar course that meets weekly across the third year. This course continues the multi-disciplinary, multi-theme and interactive approach of Fundamentals of Medicine 1 and 2. All third-year students participate in this year-long sequence of weekly 1 1/2 hour sessions covering a variety of topics. Among the areas covered are the health care system, diagnostic imaging, medical decision making and evidence-based medicine, professionalism and ethics, subspecialty areas, applied basic sciences, rehabilitation and career planning, exam preparation, and related topics. Instruction is by case discussion, lecture, in-class exercises, demonstrations, clinico-pathologic conference, presentations, skills sessions, focused assignments and selected readings. The course addresses inter-disciplinary and subspecialty topics that are key in the practice of medicine, but not otherwise covered in other clerkships. Course Directors: Martha Elks, MD, PhD and David Levine, MD (July–July) (letter grade)

Fourth-Year Curriculum

Required Clerkships          Semester Credit Hours
Senior selective*            5.0 (4 weeks)
**Elective Rotations         25.0 (28 weeks)
Total Credit Hours =         35.0

*Medicine Ward service, Surgery Ward service, Obstetrics Ward service, Inpatient Pediatrics Acting internship, Medical Intensive care unit, Surgical Intensive care unit, Ambulatory Adult Health, Rural Health,

**Pass/Fail Course

Fourth-Year Course Descriptions

Elective Courses are detailed in a separate electives catalog.

Morehouse School of Medicine reserves the right to terminate or modify program requirement content, and the sequence of program offerings from semester to semester or year to year, for educational reasons which it deems sufficient to warrant such actions.

Further, MSM reserves the right to terminate programs for financial or other reasons which it determines warrant such action. The content, schedule, requirements, and means of course presentation may be changed at any time by the School of Medicine for educational reasons which it determines are sufficient to warrant such action. Programs, services, or other activities of the School may be terminated at any time due to reasons beyond the control of the School including but not limited to, acts of God, natural disasters, destruction of premises, labor disturbances, governmental order, financial insolvency, or other reasons or circumstances beyond the control of the School of Medicine.
Academic Regulations

Academic policies, academic requirements, and objectives for specific courses within each of the phases of the curriculum are determined by the teaching faculty responsible for the course, subject to approval by the MD Program Curriculum and Evaluation Committee and the Academic Policy Council. The determination of grades is the responsibility of the department having jurisdiction over a course.

Course directors provide grading policies for their courses at the beginning of each course. These policies allow students to understand how grades are calculated and to evaluate their academic standing at any time. Grades may be based on performance on written or oral examinations, standardized testing, papers, presentations, faculty evaluation, attendance and other factors. Non-cognitive performance, including maturity, demeanor, cooperation, responsibility, ethics, and similar attributes are also factors in the assessment of performance. For each required course and clerkship, students will be expected, as a professional duty, to provide feedback regarding their experiences and perceptions about the content covered, methods of presentation, and the effectiveness of presentations. Departments and course directors in cooperation with the Student Academic Progress and Promotion Committee set criteria for remediation and/or repeat of failed courses.

Class Attendance and Examination Policy

Class attendance rules are established by individual course directors or instructors; however, class attendance is expected. Attendance throughout the clinical clerkships and other clinical experiences involving patient care is required. Excessive absences will result in incomplete or no credit for clinical experiences. Laboratory assignments are usually cooperative endeavors, thus absenteeism of one student is an imposition on others. If excessive, such absenteeism is regarded as a serious breach of conduct.

Attendance is required for some specific sessions and courses. Attendance is mandatory for tests and final exams. Excused absence from an examination must be obtained from the Dean of Student Affairs prior to the examination or upon documentation of illness or other emergency taking place at the time of the examination. An unexcused absence from an examination will constitute a failure on the examination. Whether an absence is excused is determined only by consultation of the course director with the Dean of Student Affairs.

Examinations to make-up a deficiency due to an excused absence can be scheduled only in the week following final examinations.

Student promotion from one year to the next, recommendations for repeat of courses, or recommendations of dismissal are based upon academic performance in courses as well as upon evaluation of professional attitude and judgment, emotional health, fiscal responsibility, character and professional ethics, as determined by the Student Academic Progress and Promotions Committee of MSM.

Satisfactory performance on the United States Medical Licensing Examination, Step 1 (USMLE, Step 1) is required for promotion to the third year. A total passing score satisfies this criterion for promotion.

Similarly, in order to qualify for receipt of the MD degree from MSM, students must record an overall passing score on the United States Medical Licensing Examination, Step 2 (CK and CS) (USMLE, Step 2).
Requirements for the Degree of Doctor of Medicine

The course of medical education for the Doctor of Medicine degree ordinarily consists of a minimum of four years of study. Students recommended for the degree of Doctor of Medicine shall have completed an entire course of instruction as matriculated medical students, and must have demonstrated the knowledge, skills, maturity, emotional stability and integrity judged by the faculty to be essential to an effective physician. Each student must pass both Step 1 and Step 2 CK and CS of the USMLE as a requirement for graduation. Upon completion of the curricular requirements, the degree is awarded following the recommendation of the Promotions Committee, the Faculty, the Dean and the approval of the Board of Trustees. Candidates must have discharged all current indebtedness to the School to qualify for graduation.

Morehouse School of Medicine confers the MD degree in May and December of each year. However, there is only one Commencement Exercise in May of each year. All students must complete all requirements for receipt of the MD degree within one month of the diploma date in order to receive a diploma.

Honors in Community Service/ Honors in Translational Neurobiology

Students who demonstrate excellence in the first-year Community Health course are invited to participate in the Honors in Community Service Program. This mentored program involves additional community service and planning, executing, evaluating and reporting on a community service project. Students receive recognition of this honor at graduation.

A second program, Honors in Translational Neurobiology combines a research experience in clinical or bench neuroscience along with translation of findings to the community through community presentations, empowerment, or both. This mentored program combines work with the Neuroscience Institute with the Center for Service Learning. Students receive recognition of this honor at graduation.

Dual Degrees

Students have pursued combined degrees including, but not limited to MD, PhD, MD, MSCR, and MD, MPH. Information on the curricula and courses of these degree programs are outlined in the Graduate Education in Biomedical Sciences (PhD, MSCR) and Public Health Education (MPH) sections of the catalog.
Morehouse School of Medicine
Overview

MSM is accredited by the Southern Association of Colleges and Schools. Graduate Education in Biomedical Science offers programs of study leading to the MS in Clinical Research (MSCR), MS in Biomedical Research (MSBR), MS in Biomedical Technology (MSBT), and PhD in Biomedical Sciences. The first PhD was awarded in 1998. The MS programs are newer, accepting our first MSCR students in 2002, first MSBR students in 2008 and first MSBT student in 2009. The primary goal of these programs is to produce scientists, especially individuals underrepresented in science, well trained to teach and conduct biomedical research. MSM-trained biomedical scientists are encouraged to have a special commitment to educating underrepresented minority students and to performing research on diseases that disproportionately affect underserved populations. The mission is a key factor in guiding the selection of applicants for admission and in developing the program curricula.

These graduate programs are overseen by the Graduate Education in Biomedical Sciences Committee (GEBSC), a committee of the graduate faculty which sets program policy and serves in an advisory capacity to the MSM Academic Policy Council in general and to the Associate Dean for Graduate Studies in particular.

The PhD in Biomedical Sciences program is designed to develop independent investigators capable of assuming leadership roles in academic, government, and corporate biomedical research. It involves a core-didactic curriculum followed by extensive dissertation research directed toward contributing new discoveries that will advance the field in which the student is interested.

The MS in Clinical Research program is a broad-based multi-disciplinary graduate level program in clinical research designed to prepare clinical faculty and senior residents for a career in clinical research. The program provides training in the principles and methods of biostatistics, epidemiology, genetics and clinical trials, outcomes research, health services research, health economics and application of these principles and methods to clinical research. A Multidisciplinary Clinical and Translational Research (MCTR) Certificate program is also offered to address the needs of a variety of trainees who will participate as members of multidisciplinary research teams.

The MS in Biomedical Research program provides a core-didactic and thesis-based curriculum for college graduates seeking a terminal, thesis-based Master’s degree or considering the future pursuit of doctoral degrees in research or the health sciences. The program allows students to obtain a graduate degree; further explore career options in the biomedical sciences; document their ability to handle graduate-level coursework; and conduct a mentored research project in an area of interest to them.

The MS in Biomedical Technology program is a non-thesis degree program for college graduates preparing for, or already engaged in, biomedical technology careers. The classroom curriculum is similar to that of the thesis-based program. Beyond the classroom, students in this program will focus on gaining experience in
developing and applying experimental design, and a variety of state-of-the-art biomedical research methods and instrumentation.

The Post-Baccalaureate Certificate Program is a one-year program that includes graduate-level coursework across a variety of biomedical topics. This program challenges students in advanced-level graduate courses, provides support for improving MCAT scores, helps develop an understanding of available careers in the health professions, provides diverse clinical experiences, improves communications skills through writing workshops and mock interviews, improves study methods, and assists in improving strategies for developing successful applications to professional health programs.

Application Process

Prospective students may apply over the internet by visiting the Morehouse School of Medicine website (www.msm.edu). There is a $50 non-refundable application fee for all GEBS degree programs. Applicants seeking admission to the all GEBS degree programs must:

- Hold a baccalaureate degree or the equivalent from an accredited undergraduate institution.
- Have a record of superior academic achievement in undergraduate studies in the natural sciences (e.g., biology, chemistry, or physics).
- The Graduate Record Exam (GRE) General Exam is required for PhD, MSBR and MSBT applicants. Scores cannot be older than 5 years. Applicants are also encouraged to take one of the science subject exams in Biochemistry, Cell and Molecular Biology; Biology; or Chemistry.

Application instructions for the PhD, MSBR and MSBT degree programs can be viewed at http://www.applyweb.com/apply/mh2/instruct_mhbio.html. Applicants must apply online by setting up a secure account at http://www.applyweb.com/apply/mh2/indexa.html. This system allows you to work on your application, save your work, and return until you’re ready to submit.

- PhD applications for fall admission are due by February 1 at the latest.
- MSBR and MSBT applications for fall admission are due by May 1 at the latest.

Application instructions for the MSCR degree programs can be viewed at http://www.msm.edu/educationTraining/degreePrograms/GEBS/MSCR/application.aspx.

- MSCR applications for fall admission are due by April 6 at the latest.
- MSCR applications for continuing MSM students to an MSCR dual degree program are due November 9 at the latest.

Application instructions for the Post-Baccalaureate certificate program can be viewed online at http://www.msm.edu/educationTraining/degreePrograms/GEBS/PostBaccCertificate.aspx. Applicants must complete the online application found at http://fs10.formsite.com/bbanks/form46/index.html.

- Post-Baccalaureate certificate program applications for fall admission are due by May 1 at the latest.
Additional information about application materials and the admissions process may be obtained by calling the Office of Admissions and Student Affairs at (404) 752-1650, by sending an email to admissions@msm.edu, or by sending your request to the address below. Please specify which program you are inquiring about.

Office of Admissions and Student Affairs
Morehouse School of Medicine
Graduate Education in the Biomedical Sciences
720 Westview Drive SW
Atlanta, GA 30310-1495

International Applicants
Additional requirements for international applicants are included on the web pages listed above for application instructions. If you have difficulty accessing this document online, you may request that a copy be sent by email, FAX, or post, through one of the contact points listed above.

Selection Criteria and Selection Process
Selection of applicants for the graduate degree programs in the biomedical sciences is competitive. Applications are evaluated by the appropriate Admissions Committee. The evaluations are based on undergraduate background and performance in general and performance in the sciences in particular. In addition, performance on the Graduate Record Examination and letters of reference from former or current science instructors and research mentors are important in judging a student’s preparedness for graduate study. Prior research experience is a factor in the selection process, but is not required. When possible, applicants are invited for interviews. After considering the applicants for each class, the Admissions Committee forwards its recommendations to the Associate Dean, who offers admission based on the Committee recommendations, the availability of space in the program, and the availability of funding.
Master of Science in Biomedical Research

Associate Dean for Graduate Studies: Douglas F. Paulsen, PhD

Program Manager: Jamillah McDaniel, MPH

Requirements for the MSBR Degree

Coursework

The first semester of study is focused on instruction in core (required) courses covering fundamental aspects of cell, tissue, and organ system structure and function, as well as biochemistry and molecular biology. It also introduces methods, instrumentation, ethics, critical thinking, and writing skills critical to success as a professional scientist. Students are required to maintain a B average in their coursework to advance in the program. In the second semester students take elective courses and identify an advisor for their advanced study and research. Students may study with graduate faculty in a variety of basic science and clinical departments conducting basic biomedical research. Current areas of focus include AIDS and infectious diseases, cancer, cardiovascular disease, cell biology, developmental biology, molecular biology, neuroscience, reproductive biology, temporal biology, and vision research. The student’s research advisor must be a member of the MSM graduate faculty. Once an advisor is identified, students gain research experience in the advisor’s laboratory.

Qualifying Exam

The qualifying exam for the MS in Biomedical Research involves 2 parts: 1) the Core Comprehensive Exam (CCE) and 2) the Thesis Proposal. The CCE is administered at the end of the first semester of study (in January for students who entered the previous fall). The exam includes closed-book essay questions and oral examinations by the directors of the Core Courses. A passing grade (80%) is required overall on the closed–book components and on the oral exam to obtain an overall pass for the CCE. Once students have passed the CCE, they complete their lab rotations and select a research advisor.

The research advisor will help students plan their thesis research projects, and select their thesis committee. The second part of the qualifying exam process is the development of a formal thesis research proposal describing the background, experimental design, methods, and timeline for the student’s thesis research. After submitting the proposal, the student will defend it in an oral presentation to their thesis committee. Committee approval of both the written proposal and oral presentation of the proposal constitutes successful completion of the second part of the qualifying exam.

Completion of Degree Requirements

Once the thesis research is completed to the satisfaction of the student’s committee, the student must prepare a written thesis describing the background, approach, and results of the work, including a discussion of the significance of the findings in advancing scientific knowledge. Successful thesis research must constitute a significant, original contribution to scientific knowledge as judged by the thesis committee. Once the thesis has reached its final stages, the student must, with the approval of the committee, schedule a public presentation and defense of the work. The student’s committee will determine whether the student has successfully defended the
thesis. The committee usually requires final adjustments to the written thesis after a successful oral defense. Once the thesis has been successfully defended and the final modifications accepted by the committee, copies of the final document must be submitted to the graduate office to complete the requirements for the MSBR degree.

*The M.S. curriculum is subject to ongoing revisions and may undergo changes during a student’s tenure, including changes that affect graduation requirements.

**The student’s thesis committee determines when, and whether, sufficient research has been successfully completed to merit the M.S. degree. A minimum of 12 hours of Thesis Research is required for the degree.
Master of Science in Biomedical Technology

Associate Dean for Graduate Studies: Douglas F. Paulsen, PhD

Program Manager: Jamillah McDaniel, MPH

Requirements for the MSBT Degree

Coursework

The first semester of study is focused on instruction in core (required) courses covering fundamental aspects of cell, tissue, and organ system structure and function, as well as biochemistry and molecular biology. It also introduces methods, instrumentation, ethics, critical thinking, and writing skills critical to success as a professional scientist. Students are required to maintain a B average in their coursework to advance in the program. In the second semester students take elective courses and identify an advisor for their technical research program. The technical advisor must be a full member of the Morehouse School of Medicine Graduate Faculty.

Qualifying Exam

The qualifying exam for the MS in Biomedical Technology involves 2 parts: 1) the Core Comprehensive Exam (CCE) and 2) the Technical Apprenticeship Proposal. The CCE is administered at the end of the first semester of study (in January for students who entered the previous fall). The exam includes closed-book essay questions and oral examinations by the directors of the core courses. A passing grade (80%) is required overall on the closed–book components and on the oral exam to obtain an overall pass for the CCE. Once students have passed the CCE, they complete their lab rotations in core laboratories and select a technical advisor.

The second part of the qualifying exam process is the development of a technical apprenticeship proposal. This involves a number of steps, all of which lead to the approval of the student’s technical apprenticeship proposal by his or her technical advisory committee.

The technical advisor will help them plan their technical apprenticeship program, and choose their technical advisory committee. The formal technical apprenticeship program should describe the students’ educational background and experiences in research and technology; a description of the students’ objectives and goals; and descriptions of the concepts, techniques, and methodologies the student intends to learn through the technical apprenticeships, including appropriate advisors for these. After submitting the proposal, the student will defend it in an oral presentation to their technical advisory committee. Committee approval of both the written proposal and oral presentation of the proposal constitutes successful completion of the second part of the qualifying exam.
Technical Apprenticeship Program

The student must select, with the aid of the technical advisor, a training program and a technical advisory committee. That committee must include the advisor and at least two additional professional scientists with relevant technical expertise, one of whom must be a member of the Morehouse School of Medicine Graduate Faculty. Any full member of the Morehouse School of Medicine Graduate Faculty may chair this committee, but it is generally the technical advisor. Additional committee members may be included based on appropriate expertise. A committee with more than four members may be unwieldy and actually slow a student’s progress. Students may select among the existing core laboratories at MSM (http://www.msm.edu/research/research_centersandinstitutes/RCMI/coreFacilities.aspx) or, with the assistance and approval of the technical advisor, or devise a hybrid program that encompasses their individual interests and needs.

Completion of Degree Requirements

While the student is completing the technical apprenticeship requirements, they should be discussing the nature of their culminating examination. In most cases this will involve the assignment of some sort of unknown or technical problem related to the student’s apprenticeship to be solved. The culminating examination should be completed no later than mid-March for the student to participate in the May commencement ceremony. The student’s committee will determine whether the student has successfully completed his or her examination. All members of the student’s technical advisory committee must be present at the assessment of the examination results and approval must be unanimous.

The technical advisory committee may require analyses be repeated or that additional analyses be carried out to achieve a passing score.

Master of Science in Clinical Research

Director of MSCR: Elizabeth O. Ofili, MD, MPH, FACC
Co-Director of MSCR: Alexander Quarshie, MBChB, MS
Program Manager: Jacquelyn Ali, MS

Requirements for the MSCR Degree

Coursework
The Master of Science in Clinical Research program is designed to allow the trainees to complete the CRECD program in 15 or 24 months. Trainees who elect the 15-month option will devote at least 75% effort to the program. The schedule is sufficiently flexible to allow optimum participation of students and instructors. Trainees with ongoing clinical responsibilities will be best served by flexibility in the access to didactic teaching materials and interchanges with faculty. E-learning facilities will be provided to address this challenge, and enhance the training experience. The didactic coursework is structured to provide mastery of the fundamentals of Clinical Research, in the traditional disciplines of epidemiology, biostatistics, data analysis and clinical trials. A unique course has been developed that will challenge the trainees from incorporating social science and behavior theory concepts to understanding health disparities. The course will also cover ethical issues in clinical research, the legacy of the Tuskegee experiments, and its impact on participation by African Americans in Clinical Research.

Practical Skills Workshop
A required practical skill workshop series consists of an introduction to principles of clinical research and an introduction to medical informatics. The practical skill workshop series is offered during the summer of the first year. This series is designed to help trainees begin work on their mentored projects. Topics covered include: an introduction to clinical research, obtaining research support and grant funding mechanisms, proposal development, study designs, analysis of secondary data, cultural competency, career development, human subject advocacy and introduction to medical informatics.

Clinical Research Seminar Series
This weekly series features Clinical Research Education and Career Development (CRECD) trainees, Morehouse School of Medicine instructors, consultants, and mentors as well as distinguished outside speakers. Trainees will have an opportunity to gain exposure to a variety of role models from within, as well as outside the Morehouse School of Medicine community. Trainees will also present their work for critical review and comments. This format will expose the trainees to contemporary critical thinking on health disparities, generate new ideas, and foster research collaboration within Morehouse School of Medicine and other collaborating institutions.
Mentored Research Project

The mentored research project will account for 12 of the 36 credit hours required for successful completion of the MS in Clinical Research. Applicants to the MS program will develop research proposals in consultation with their clinical chairs and/or research mentors and submit them for review and approval by the Curriculum Committee. The proposal will form the basis for the mentored research project.

Minimum Entrance Requirements for the Categories of MSCR Students

**MSM faculty/senior residents or NIH, CRECD-funded applicants**
- Faculty appointment at MSM (7 years or less)
- Must be U.S. citizens or have permanent resident visa status
- Letter from the chair of your department
- Must have a terminal degree
- Three individual letters from persons who are capable of speaking to your professional skills and goals
- Two- to three-page research abstract or narrative
- Applicant and lead mentor NIH style biosketch
- Fully completed online application

**Doctorate Level - Non-MSM Faculty**
- Terminal degree
- Three individual letters from persons who are capable of speaking to your professional skills and goals
- Two- to three-page research abstract or narrative
- Applicant and lead mentor NIH style biosketch
- Fully completed online application

**Undergraduate/Master's Level**
- GRE Scores
- Bachelor's Degree
- Narrative on research interest or experience (can be substituted for narrative on application)
- Two letters of professional reference
- Lead mentor NIH-style biosketch (if applicable)
- Official transcript
- Fully completed online application

**Current PhD or MD student**
- Good academic standing
- One letter from mentor stating their commitment to be your lead mentor while in the program
- One additional letter of reference
- Lead mentor NIH style biosketch
- Two- to three-page research abstract or narrative
- Fully completed online application

MSCR/PhD Dual-Degree Program

Co-Directors of MSCR/PhD:
Elizabeth O. Ofili, MD, MPH, FACC
Douglas F. Paulsen, PhD, FAAA
Alexander Quarshie, MBChB, MS

Program Managers:
Jacquelyn Ali, MS
Jamillah McDaniel, MPH

The MSCR/PhD dual-degree program is designed to provide novel training for PhD students with outstanding potential for careers in clinical and/or translational research. The program is designed to be completed in six years.

Students initially enrolling in the MSCR program may also apply for entry into the MSCR/PhD dual-degree program. These students must complete an application for, and meet the standards for acceptance into the PhD program to qualify for the dual-degree program.

The integrated training will prepare graduates to pursue long-term careers in multidisciplinary clinical and translational research as leaders and members of multidisciplinary research teams in academic, industry or other settings. This includes preparing trainees to be competitive for faculty positions at excellent academic medical centers and universities or colleges as well as positions at federal agencies such as NIH, FDA, and CDC, and for clinical and translational research careers in industry.

Admission Requirements

**PhD Student Applicants:** Students who are enrolled in the PhD program may apply for the MSCR/PhD program while completing the first year of graduate study. Students must pass each core course with a minimum of a B average and pass the PhD core comprehensive exam (CCE) in order to be eligible to enter the dual degree program. Students at more advanced stages of their training may also apply if their dissertation project involves a clinical and/or translational research specific aim, however additional coursework will be required.

**MSCR Student Applicants:** Students enrolled in the MSCR Program may apply for the MSCR/PhD program while completing the first year of graduate study. Students must pass each core course in the MSCR curriculum with a minimum of a B average in order to be eligible to enter the dual-degree program. In addition, such applicants must submit the standard application for entry into the PhD program and be accepted into that program to qualify for entry into the dual-degree program.
All students applying to the MSCR/PhD dual-degree program must identify a research mentor and have his or her approval of a tentative dissertation project that includes at least one specific aim involving clinical and/or translational research.

All applicants to the dual degree program must complete a separate application for entry. The application for all applicants includes the following components:

1.) A 1-page personal statement which details research interests and career goals
2.) Curriculum Vitae
3.) Brief outline of the proposed clinical/translational component of the student’s dissertation research project and its relationship to the overall dissertation. This outline should include background/introduction, hypothesis, specific aims, preliminary data (if any), proposed research methods, study population, statistical analysis plan, and human subjects section. This project aim should coincide with the ongoing research projects in the trainee’s laboratory or project and should not comprise a separate research thesis unless advised otherwise by the research mentor.
4.) Three letters of recommendation including letters from
   a. the trainee’s primary mentor/advisor, and
   b. the Associate Dean for Graduate Studies. (for PhD Applicants)
   c. the Director/Co-Director of the MSCR Program (for MSCR Applicants)

Degree Requirements

Trainees in the MSCR/PhD program must successfully complete the dual degree requirements to graduate. A separate thesis for the MSCR program is not required because all trainees will complete a PhD dissertation including at least one clinical/translational specific aim.

Coursework

Entry into the MSCR/PhD dual degree program begins after enrollment in either the MSCR or PhD program. In either case, the first year two years of study focus on instruction in core (required) courses covering fundamental aspects both basic science and clinical research. Although the first and second years of study will differ depending on the program through which the student entered, by the end of the second year, students in the program will all have completed essentially the same core coursework. This coursework covers cell, tissue, and organ system structure and function, as well as biochemistry, molecular biology, biomedical genetics, and epidemiology. It also introduces clinical and basic science research methods, informatics, instrumentation, research ethics, critical thinking, basic and advanced statistical analysis, and writing skills critical to success as a professional scientist. Students are required to earn a B in each of their core courses to advance in the program and to maintain stipend support. At the end of the first year, students identify an advisor for their advanced study and research. Students may study with graduate faculty in a variety of basic science and clinical departments conducting
GRADUATE EDUCATION IN BIOMEDICAL SCIENCES

basic biomedical or clinical research. Current areas of focus include AIDS and infectious
diseases, cancer, cardiovascular disease, cell biology, developmental biology, molecular biology,
neuroscience, reproductive biology, temporal biology, and vision research. The student’s
research advisor must be a member of MSM graduate faculty. Once an advisor is identified,
students begin developing a research plan for their dissertation which must include at least one
clinical or translational research specific aim. Elective courses are not required for students in the
MSCR/PhD program, although additional electives may be selected with the help and approval
of the research advisor to assure an adequate knowledge base for the field of study chosen.

Qualifying Exam

The qualifying exam for the PhD in Biomedical Sciences component of the dual degree involves
3 parts: 1) the Core Comprehensive Exam (CCE); 2) the Elective Competency Certification
(ECC); and 3) the Dissertation Proposal. The CCE is administered at the end of the year of core
basic sciences study (in June of the first year for students who entered the PhD program the
previous fall and in June of the second year for students entering the MSCR/PhD program
through the MSCR program). The exam includes closed-book essay questions and oral
examinations by the directors of the core basic science courses. A minimum score of 80% is
required on each section to pass this comprehensive exam.

Once students have passed the CCE, they complete their lab rotations and select an advisor, their
dissertation research project, and their dissertation committee. The dissertation committee must
include at least one basic scientist and one clinical researcher.

The second part of the qualifying exam process is the development of a formal dissertation
research proposal describing the background, experimental design, methods, and timeline for the
student’s dissertation research. After submitting the proposal in the required format, the student
will defend it in an oral presentation to his or her dissertation committee. Committee approval of
both the written proposal and oral presentation of the proposal constitutes successful completion
of the second part of the qualifying exam.

Degree Candidacy

Students having earned a B or better in each of their core courses and having passed both parts of
their qualifying exam are eligible to apply for degree candidacy. After earning candidacy,
students will expend most of their effort completing their dissertation research and preparing
their dissertation. During the conduct of the dissertation research, the student is required to
convene regular (once per semester minimum) meetings of the dissertation committee to report
progress, receive direction, and earn dissertation research credit hours.
Completion of Degree Requirements

Once the dissertation research is completed to the satisfaction of the student’s dissertation committee, the student must prepare a written dissertation describing the background, approach, and results of the work, including a discussion of the significance of the findings in advancing scientific knowledge. Successful dissertation research must constitute a significant, original contribution to scientific knowledge as judged by the dissertation committee. To earn the dual degree, the student must publish at least one scientific paper in a peer-reviewed scientific journal as first author covering an aspect of his or her dissertation research. Once the dissertation has reached its final stages, the student must, with the approval of the committee, schedule a public presentation and defense of the work. The student’s committee will determine whether the student has successfully defended the dissertation. The committee usually requires final adjustments to the written dissertation after a successful oral defense. Once the dissertation has been successfully defended and the final modifications accepted by the committee, paper and electronic copies of the final document as well as documentation of the published article must be submitted to the graduate office to complete the requirements for the MSCR/PhD dual degree.
Curriculum for students entering through the PhD Program

The MSCR/PhD program is designed to begin after PhD students have completed coursework and CCE but prior to the development and defense of their dissertation proposal, so that the interdisciplinary perspective can be fully incorporated into the student’s dissertation research.

**Biomedical Science Presentation requirements**: Students are required to participate as first-author presenters in the Curtis Parker Student Research Day each year beyond their second year of training and at least one national scientific meeting.

**Dissertation Research requirements**: Students are required to complete a minimum of 25 Dissertation Research credit hours. Supervised Research is taken in lieu of dissertation research when dual degree students have not yet completed requirements for candidacy. The courses may not be taken simultaneously.

Master of Science in Medical Sciences

Program Director: Rita B. Finley, PhD

Program Manager: Jamillah McDaniel, MPH

Requirements for the MSMS Degree

The Master of Science in Medical Sciences Degree is a two-year non-thesis program designed to increase competency in the biomedical sciences, thereby enhancing academic credentials for entry into medical school or placement into careers in the health sciences. The first year of study focuses on instruction in core science courses such as Biochemistry and Anatomy & Physiology, as well as foundational courses in the public health sciences such as Fundamentals of Public Health and Epidemiology. Additionally, the program includes a series of courses aimed at enhancing performance on the Medical College Admissions Test (MCAT) and includes an online course in Medical Terminology. In the second year, standardized exam preparation continues and introductory courses in key biomedical science courses are added such as Introduction to Neurobiology, Introduction to Medical Pharmacology and Introduction to Medical Microbiology, along with courses in Biostatistics, Ethics in Vulnerable Populations and Medical Informatics. During the second year, in lieu of a thesis, a service-learning project will be conducted.

Completing the Requirements

Students are required to maintain an overall B average in their coursework to advance in the program and to earn the degree. Students who have successfully completed the first year with a 3.0 GPA may receive a certificate of course completion.

*The M.S. curriculum is subject to ongoing revisions and may undergo changes during a student’s tenure, including changes that affect graduation requirements.*

### Graduate Education in Biomedical Sciences Course Descriptions

**GEBS 500 Introduction to Epidemiology (3 Credit hours)**

This course provides students with knowledge of patterns of disease occurrence in human populations and factors that influence these patterns. It is designed to enable students to identify and use systematic procedures that are helpful in determining epidemiological relationships. Principles and methods of epidemiologic investigation, both of infectious and non-infectious diseases are discussed. Prerequisites: GEBS 524 and enrollment in an MSM degree program or permission of the MSCR program administration. Fall, Letter Grade, Course Director: Lee Caplan, Ph.D.
GEBS 501 Introduction to Medical Informatics (2 Credit hours)
This course will address using data from clinical information systems in performing clinical research, including the strengths and limitations of these data. Topics include: overview of medical informatics, discussion of the nature of computer-based data including medical vocabularies, large databases, the web, and confidentiality-related issues. Prerequisites: Enrollment in an MSM degree program or permission of the MSCR program administration. Fall. Letter Grade, Course Director: Alexander Quarshie, MBChB, M.S.

GEBS 502 Introduction to Principles of Clinical Research (2 Credit hours)
This course is offered in collaboration with NIH and delivered through video-conferencing. It provides an overview and introduction to the various types of clinical research including patient-oriented research, epidemiology, behavioral sciences and health services research, and introduction to evidence-based medicine for clinical researchers. The course introduces protocol design, mentoring development, and gathering of evidence, including decision analysis. Prerequisites: Enrollment in an MSM degree program or permission of the MSCR program administration. Fall. Letter Grade. Course Director: Alexander Quarshie, MBChB, M.S.

GEBS 503-508 Seminar in Biomedical Sciences I-VI (1 Credit hour each)
Students are required to attend scientific seminars in biomedical research in order to keep up-to-date with the latest discoveries and developments in biomedical research. Students attend a minimum of 6 research seminars per semester, document their attendance, and write and submit a summary for each. Prerequisite: Enrollment in PhD, MSBR or MSBT program. Fall and Spring. Pass/Fail. Course Director: Doug Paulsen, Ph.D.

GEBS 509 – 510 Biomedical Science Presentation I-II (1 Credit hour each)
Students are required to prepare and give a scientific presentation (either seminar or poster format) at a public, advertised venue. PhD students are required to give two such presentations and MS students are required to give one prior to graduation. One presentation may include a required presentation at the Annual Curtis L. Parker Student Research Day. Prerequisite: Enrollment in PhD, MSBR or MSBT program. Fall and Spring. Pass/Fail. Course Director: Doug Paulsen, Ph.D.

GEBS 511 Clinical Research Seminar (1 Credit hour)
This course features local, regional, and national cutting edge research topics relevant to health disparities, and allow trainees to hear from leading experts on clinical and translational research. The research seminars are presented by MSM faculty, Atlanta CTSI faculty and visiting scientists, and provide a forum to explore collaborative research and mentoring opportunities. MSCR Trainees are featured in a special session where they present their work for critical review and comments. This format exposes the trainees to contemporary critical thinking on health disparities to generate new ideas and to foster research collaboration within the Morehouse School of Medicine as well as with collaborating Atlanta CTSI institutions. Prerequisites: Enrollment in an MSM degree program or permission of the MSCR program administration. Spring. Pass/Fail. Course Directors: Alexander Quarshie, MBChB, M.S. and Rigobert Lapu Bula, M.D., Ph.D.
GEBS 512 Ethics of Clinical and Translational Research in Vulnerable Populations (2 Credit hours)
This course challenges trainees to incorporate social science and behavior theory concepts in understanding health disparities. This multidisciplinary course will provide social, cultural and historical perspectives on the development of ethical standards for clinical research among special at-risk populations. Student appreciation of culture as a predominant force in shaping behavior and values will be enhanced. The course will help develop behaviors and skills for effectively recruiting and engaging patients from diverse cultural backgrounds, into health care research. Prerequisites: Enrollment in an MSM degree program or permission of the MSCR program administration. Fall. Letter Grade. Course Director, Julian Menter, Ph.D.

GEBS 513-514 Laboratory Rotations I-II (1 Credit hour each)
The objective of this course is to provide students with experiences that will allow them to make an informed choice with respect to the focus of their research or technical apprenticeship. A second objective is for the student to practice proper methods for logging research methods and results in a laboratory notebook. Each PhD student must complete two 6-week rotations and each MS student must complete two 4-week rotations. Prerequisite: Enrollment in PhD, MSBR or MSBT program. Fall and Spring. Pass/Fail. Course Director: Doug Paulsen, Ph.D.

GEBS 516 Mentored Research Project (MSCR – Total of 12 Credit hours)
This course provides an opportunity for students to integrate the competencies acquired in course work, learn how to write a research proposal, develop a research design, analyze data for presentation at a national scientific meeting and generate a scientific manuscript. Four major outcomes of the mentored project that must be satisfied prior to receiving the MSCR degree include 1) submission and presentation of an abstract at a regional or national scientific meeting, 2) submission of a manuscript to a peer-reviewed journal, 3) submission of a grant to a funding agency, and 4) final presentation of the student’s mentored research. Mentor evaluation forms must be signed by the student’s lead mentor indicating that all of the above requirements have been satisfied. Prerequisites: Enrollment in an MSM degree program or permission of the MSCR program administration. Fall and Spring. Year 1, Pass/Fail, Year 2 L/G. Course Director: Alexander Quarshie, MBChB, M.S.

GEBS 517 Graduate Biochemistry (4 Credit hours)
The overall goal of this course is to provide information in different formats that will aid in the student’s understanding of biochemical principles and enhance problem-solving abilities. Students are expected to be competent, reliable, self-directed and to do extensive critical reading and analysis of some information available through internet resources and in original publications. Understanding biochemical principles, key concepts and current research is a necessity since biochemistry provides a foundation for many other components in the graduate curriculum. Prerequisite: Enrollment in an MSM degree or postbaccalaureate certificate program. Fall. Letter Grade. Course Director: Gary Sanford, Ph.D.
GEBS 517L Graduate Biochemistry Laboratory (3 Credit hours)
This is an integrated lecture and lab course covering basic theories and techniques used in the experimental life sciences. The students will have an opportunity to experience a broad range of biochemical and molecular techniques that are currently used in the fast-paced modern biomedical research. The goal of this course is to introduce students to basic research techniques through laboratory exercises designed to provide experiences with the equipment and techniques that are the foundations for modern biomedical research. Prerequisite: Enrollment in an MSM degree program. Fall. Letter Grade. Course Director: Gary Sanford, Ph.D.

GEBS 518 Principles of Anatomy and Physiology I (3 Credit hours)
This is a team-taught course that provides an overview of cellular structure and function, levels of tissue organization, early embryology, as well as the morphology and function of the cardiovascular, lymphatic and respiratory systems of the human body. The course integrates laboratory exposure with didactic anatomy and physiology presentations to further emphasize the principles of organization as related to major clinical and functional themes. This segment of the two semester course deals with cell and tissue structure and function and begins coverage of the organ systems. The course composition will include a virtual histology lab, selected gross anatomy pro-sections and radiological anatomy. Prerequisites: Enrollment in the M.S. in Medical Sciences Program or permission of course director and program administration. Fall. Letter Grade. Course Director: Rita Finley, Ph.D.

GEBS 519 Principles of Anatomy and Physiology II (3 Credit hours)
This is a team-taught course that provides an understanding of the morphology and function of the digestive, skeletal, muscular, nervous, endocrine, and reproductive systems of the human body, as well as an overview of fetal development. The course integrates laboratory exposure with didactic anatomy and physiology presentations to further emphasize the principles of organization as related to major clinical and functional themes. This segment of the two-semester course focuses on completing the coverage of organ system structure and function. The course composition will include a virtual histology lab, selected gross anatomy prosections, the Anatomy in Clay Learning System, and radiological anatomy. Prerequisites: Enrollment in the M.S. in Medical Sciences Program or permission of the course director and program administration. Spring. Letter Grade. Course Director: Rita Finley, Ph.D.

GEBS 520 Analysis of Frequency Data (3 Credit hours)
This course is intended to provide a more detailed approach to the analysis of categorical data in clinical and translational research. Topics covered: Tests and measures of association for contingency table analysis; goodness of fit, and the odds ratio. Estimation and hypothesis testing within the context of the general linear model (the analysis of variance, multiple regression, logistic regression and survival analysis) are addressed. Prerequisites: GEBS 524 and enrollment in an MSM degree program or permission of the MSCR program administration. Spring. Letter Grade. Course Director: Traci Leong, Ph.D.
GEBS 522 Clinical Trials (2 Credit hours)
Principles for the design and conduct of clinical trials are discussed. Emphasis will be given to protocol preparation, randomization, sample size, trial monitoring, ethical issues and data analysis. Prerequisites: Enrollment in an MSM degree program or permission of the MSCR program administration. Spring. Letter Grade. Course Director: Priscilla Pemu, M.D., M.S.C.R.

GEBS 523 Scientific Writing and Proposal Development (3 Credit hours)
The objective(s) of this course are to develop: 1) the ability to evaluate a variety of funding sources, write concept papers and letters of intent in biomedical sciences, 2) an approach to writing a competitive research proposal, 3) an understanding of the NIH review process. The course provides an overview of these processes in a series of didactic discussions and take-home assignments. Students are required to design a study for specific disease and prepare a scientific protocol and a grant application using Public Health Service Form 398 including the development of a consent form and budget. Emphasis will be placed on grantsmanship and scientific writing, the Institutional Review Board and NIH review process. Prerequisites: Enrollment in an MSM degree program or permission of the MSCR program administration. Spring. Letter Grade. Course Director: Gregory Strayhorn, M.D., Ph.D.

GEBS 524 Fundamentals of Biostatistics (3 Credit hours)
This course introduces various statistical methods used in clinical and translational research and public health management. Students are trained in probability theory, data management and interpretation of results. The standard statistical package SPSS is used with hands-on demonstrations. Topics include: Probability distributions and conditional probability; descriptive statistics; estimation; hypothesis testing; statistical inference; parametric and non-parametric statistical methodology. Prerequisites: Enrollment in an MSM degree program or permission of the program administration. Fall. Letter Grade. Course Director: Traci Leong, Ph.D.

GEBS 525 Laboratory Rotation III (1 Credit hour)
The objective of the core rotations (GEBS 513-514) is to help students make an informed choice with respect to their research focus their major research advisor. This 8-week elective rotation requires students to work in a laboratory other than that of the major advisor to develop additional skills and experience that may be helpful in their thesis or dissertation project. Prerequisites: Completion of GEBS 513 and GEBS 514, permission of the student’s research advisor, permission of the supervisor of the laboratory in which the rotation is to be carried out, enrollment in the MSM PhD in Biomedical Sciences or MS in Biomedical research program. Fall and Spring. Pass/Fail. Course Director: Doug Paulsen, Ph.D.

GEBS 528 Biomedical Genetics (3 Credit hours)
The purpose of this core course is to introduce students to human genetics, the role of genetics in human diseases, methods to detect disease susceptibility genes, the ethics of genetic testing and gene therapy for genetic diseases. Prerequisites: Grade of B or better in GEBS 517 and 517L or permission of course director. Enrollment in MSM degree program. Spring. Letter Grade. Course Director: Gale Newman, Ph.D.
GRADUATE EDUCATION IN BIOMEDICAL SCIENCES

GEBS 528L Biomedical Genetics Lab (2 Credit hours)
The objective of these laboratory exercises is to provide a hands-on experience in the detection of mutations and disease genes. The goal of this course is to instruct you on when and where to use the appropriate techniques for detection of genetic mutations. Prerequisites: Grade of B or better in GEBS 517 and 517L or permission of course director. Enrollment in MSM degree program. Spring. Letter Grade. Course Director: Gale Newman, Ph.D.

GEBS 531 Clinical Core Laboratories (2 Credit hours)
This course is designed to provide trainees with hands-on exposure to existing core units at the Clinical Research Center and how they support clinical and translational research. These cores are - Noninvasive Cardiovascular and Hemodynamics, Analytical and Protein Profiling, Bionutrition, Nursing, Recruitment/Retention, Biostatistical and Data Management, Clinical Trials, Research Subject Advocate and Data Safety Monitoring Cores. Prerequisites: Enrollment in an MSM degree program or permission of the MSCR program administration. Spring. Pass/Fail. Course Director: Alexander Quarshie, MBChB, M.S.

GEBS 532 Community Engagement and Health Disparities in Clinical and Translational Research (2 Credit hours)
This course introduces key issues in health disparities and community engaged research. Focus is on ways to assess and address health disparities, with an emphasis on inner-city and African American populations. Approaches to community engagement and community-centered research are addressed. Prerequisites: Enrollment in an MSM degree program or permission of the MSCR program administration. Fall. Pass/Fail. Course Director: Elleen Yancey, Ph.D.

GEBS 533 Critical Thinking and Scientific Communication I (2 Credit hours)
The main objective of this course is to develop critical thinking skills necessary for not only scientific research, but also daily living. Students will learn to critically analyze and communicate their opinions by both oral and written presentations. Students will be evaluated by a critical thinking pre- and post- test. In addition, students will receive training and produce oral and written reports to enhance their scientific communication skills. Prerequisites: Enrollment in an MSM degree program or permission of the program administration. Fall. Letter Grade. Course Director: Gale Newman, Ph.D.

GEBS 534 Scientific Integrity (2 Credit hours)
This course is designed to cover contemporary ethical issues at the interface of science and ethics and the professional expectations of scientists in the responsible conduct of scientific research. Topics include Methods & Mandates, Scientific Records, Authorship and Peer Review, Intellectual Property, Conflicting Interests, Human and Animal Experimentation, and Genetic Technology. Didactic tasks involve student exercises, discussion leadership, analyses of cases, case presentation and report writing. Prerequisites: Enrollment in an MSM degree program or permission of the course director. Fall. Letter Grade. Course Director; Jonathan Stiles, Ph.D.
GEBS 535 Human Biology (3 Credit hours)
Human Biology is a team-taught course that provides a broad overview of major cellular components, basic tissue types, organs and organ systems. It is designed to introduce the student to the structural and functional integration of the major organ systems by working from the single cell level to the organ system level emphasizing the relationship of structure and function. Prerequisites: Enrollment in an MSM degree program or permission of the program administration. Fall. Letter Grade. Course Director: Rajagopala Sridaran, Ph.D.

GEBS 535L Human Biology Laboratory (3 Credit hours)
This course complements the content of the Human Biology lecture course by covering microscopic structure and approaches to studying the function of cells, tissues, organs and organ systems. It includes study of the relationship between structure and function of major cellular organelles, cells associated with the four basic tissue types, organs and organ systems through histological and microscopic methods as well as functional studies. Prerequisites: Enrollment in an MSM degree program or permission of the program administration. Fall. Letter Grade. Course Director: Brenda Klement, Ph.D.

GEBS 537 Integrated Biomedical Science (4 Credit hours)
This course is intended to provide students a strong understanding of the current and future research objectives in four fields of biomedical science. Each field, Cancer biology, HIV/AIDS and Infectious Disease, Neuroscience, and Cardiovascular Research will be taught in successive 4½-week modules by research faculty from those fields. Prerequisites: Grade of B or better in GEBS 517, 517L, 535, and 535L or permission of program administration. Course Coordinator: Doug Paulsen, Ph.D.; Cancer Component Director: Gary Sanford, Ph.D.; Cardiovascular Component Director: Leonard Anderson, Ph.D., Neuroscience Component Director: Morris Benveniste, Ph.D.; HIV/AIDS and Infectious Disease Component Director: Vincent Bond, Ph.D.

GEBS 537-01 Integrated Biomedical Science: Cancer Component (1 Credit hour)
This component of the Integrative Biomedical Sciences Course will provide students with a critical look at specific areas of cancer biology, providing an assessment of what constitutes the science of cancer and where the field may be going in the future. The Cancer Biology component will consist of two class meeting per week. Each class will meet for two hours (an extra 20 minutes will be added when a quiz is scheduled). Prerequisites: Grade of B or better in GEBS 517, 517L, 535, and 535L or permission of course director and program administration. Spring. Letter Grade. Course Director: Gary Sanford, Ph.D.

GEBS 537-02 Integrated Biomedical Science: Neuroscience Component (1 Credit hour)
This component of the Integrative Biomedical Sciences Course will provide students with critical concepts in the field of Neuroscience. Lectures will include discussion of seminal experiments leading to the key discoveries that serve as part of the foundation of the field. Prerequisites: Grade of B or better in GEBS 517, 517L, 535, and 535L or permission of course director and program administration. Spring. Letter Grade. Course Director: Morris Benveniste, Ph.D.
GRADUATE EDUCATION IN BIOMEDICAL SCIENCES

GEBS 537-03 Integrated Biomedical Science: Cardiovascular Component (1 Credit hour)
The cardiovascular component of the Integrative Biomedical Sciences course will provide graduate students with a fundamental knowledgebase in the principles of cardiovascular biology at the molecular, cellular, and tissue levels. In addition to providing introductory didactic instruction in the field of cardiovascular biology, this component will also integrate leading-edge of vascular biology lectures with new developments that emerge at the interface with other inter-disciplinary fields (e.g. stem cell biology, epigenetics, systems biology, and genomic science). Prerequisites: Grade of B or better in GEBS 517, 517L, 535, and 535L or permission of course director and program administration. Spring. Letter Grade. Course Director: Leonard Anderson, Ph.D.

GEBS 537-04 Integrated Biomedical Science: HIV/AIDS and Infectious Disease Component (1 Credit hour)
This component of the Integrative Biomedical Sciences Course will provide students with critical concepts in HIV/AIDS, Malaria, and Multidrug Resistant Bacteria. Lectures will include discussion of seminal experiments leading to the key discoveries that serve as part of the foundation of the field. Prerequisites: Grade of B or better in GEBS 517, 517L, 535, and 535L or permission of course director and program administration. Spring. Letter Grade. Course Director: Vincent Bond, Ph.D.

GEBS 539 Introduction to Health Professions (2 Credit hours)
In this seminar and clinical experience course, students will develop an understanding from practitioners of various medical specialties and other health professions, the academics and personal responsibilities required to become a well-functioning health professional. Professions explored will include, but are not limited to, medicine, public health, clinical translational research, community-based participatory research and other related areas. Students will also participate in a variety of diverse clinical experiences. Personal statements, interviewing strategies, and similar topics will be addressed in workshops and skills sessions. Prerequisites: Enrollment in the MS in Medical Sciences Program or permission of course director and program administration. Spring. Letter Grade. Course Director: Rita Finley, Ph.D.

GEBS 541 Critical Thinking and Problem Solving I (4 Credit hours)
Students will be introduced to several problem-solving techniques that will be useful in their preparation for the MCAT exam. Students will work within in small discussion groups where they will have the opportunity to analyze, discuss, and exchange ideas. From these discussions, students will improve their abilities to comprehend, evaluate, and apply knowledge in order to score successfully on the MCAT. The primary goal of this course is to develop critical thinking and problem-solving skills that will be beneficial for successful performance on the MCAT. Therefore the course objectives are to critically analyze information, clearly express thoughts in a written and verbal manner, evaluate information provided in a standardized test format and to participate in group discussions strengthening problem-solving skills. Prerequisites: Enrollment in the MS in Medical Sciences Program or permission of course director and program administration. Fall. Letter Grade. Course Directors: Brandi Knight, Ph.D.
GEBS 542 Critical Thinking and Problem Solving II (3 Credit hours)
Through readings, online lectures, and group discussions, basic concepts of biology, chemistry, organic chemistry, physics, and verbal reasoning, and test-taking strategies will be addressed. Group problem-solving and critical thinking skills will be addressed in workshops and ongoing in-class problem-solving sessions. Prerequisites: Enrollment in the M.S. in Medical Sciences Program or permission of course director and program administration. Spring. Letter Grade. Course Directors: Brandi Knight, Ph.D.

GEBS 543 Critical Thinking and Problem Solving III (3 credit hours)
The primary focus of this course is to strengthen reading as well as critical thinking skills in preparation for the MCAT. The course material will include emphasis on reading dynamics, medical terminology in addition to reviewing specific concepts in: general biology, general chemistry, organic chemistry, physics, and biochemistry. Class sessions will be organized to strengthen test-taking strategies for the verbal reasoning section of the MCAT through analysis of MCAT verbal reasoning passages. Students will also be assigned multiple reading assignments in order to encourage and improve reading skills and understanding of a variety of concepts. In addition, foundational material will be addressed by combining the use of in-class lectures, online video instruction, and group problem-solving. Prerequisites: Enrollment in the M.S. in Medical Sciences Program or permission of course director and program administration. Fall. Letter Grade. Course Director: Brandi Knight, Ph.D.

GEBS 544 Survey of Medical Terminology (2 Credit hours)
Medical Terminology is offered to introduce aspiring healthcare professionals to the new language of medicine—a language that they will use throughout their careers. The course is offered in an online, self-directed format to allow students to cover required material efficiently, while also completing other required courses in the program. Students will be introduced to vocabulary for human body structures, functions, and diseases. The online course is divided into sections that emphasize etymology, definition, pronunciation and correct utilization of medical terms. With the use of an audio-visual approach to anatomy, physiology, pathology, diagnostics, and treatment regimens, students will be well prepared for future courses pursued in any healthcare field. In addition, the format of instruction offers content information and language comprehension skills useful in any career. This course is a product of Caduceus International Publishing. Prerequisites: Enrollment in the M.S. in Medical Sciences Program or permission of course director and program administration. Spring. Letter Grade. Course Director: Aleeia Johnson, M.D.

GEBS 546 Critical Thinking and Scientific Communication II (2 Credit hours)
This is a continuation of GEBS 533. The main objective of this course is to develop critical thinking skills necessary for not only scientific research, but also daily living. Students will learn to critically analyze and communicate their opinions by both oral and written presentations. Students will be evaluated by a critical thinking pre- and post- test. In addition, students will receive training and produce oral and written reports to enhance their scientific communication skills. Prerequisites: Enrollment in an MSM degree program or permission of the program administration. Fall. Letter Grade. Course Director: Gale Newman, Ph.D.
GEBS 547 Research Data Analysis (2 Credit hours)
The objectives of the course are to guide students through the application of statistical and graphical methods for biomedical data analysis (SigmaPlot 11.2 and Microsoft Excel). Students will apply appropriate techniques to research data from their individual projects. Fall. Letter Grade. Course Directors: Ward Kirlin, Ph.D., Gale Newman, Ph.D.

GEBS 550 Practical Skills Workshop Series (1 Credit hour)
This series is designed to help trainees to begin work on their mentored projects. Topics covered include, Introduction to Clinical research, Obtaining research support and grant funding mechanisms, Proposal development, Study designs, Analysis of secondary data, Cultural competency, Career development, Human subject advocacy and Introduction to medical informatics. New topics on Introduction to Translational research and Health disparities, and Research and grants administration will be introduced. Prerequisites: Enrollment in an MSM degree program or permission of the MSCR program administration. Fall. Pass/Fail. Course Director: Alexander Quarshie, MBChB, M.S.

GEBS 551 Introduction to Medical Pharmacology (3 credit hours)
This course is intended to orient graduate students and those who are interested in improving their credentials to compete for admission to a medical school within the general scope of pharmacologic science. The course is designed to introduce students to concepts of the interactions of chemical agents with living tissues. It will also provide an overall perspective of pharmacology, emphasizing basic principles and mechanisms involved in drug interactions. Specific categories of drugs will be presented and discussed based on the basic mechanism of action of the drug group. Specific drug classes to be discussed include those with an action on the autonomic and central nervous systems, and the cardiovascular system. Prerequisites: Enrollment in the M.S. in Medical Sciences Program or permission of course director and program administration. Spring. Letter Grade. Course Director: Karen Randall, Ph.D.

GEBS 552 Introduction to Neurobiology (4 credit hours)
This lecture course is designed to be an introduction to neuroanatomy and neurophysiology. It provides a survey of the basic functional organization and anatomy of the central nervous system (CNS). The topics include the external and internal morphology of the cerebral cortex, diencephalon, brain stem, and spinal cord. The blood supply to the major components of the CNS will be presented. The student will also be introduced to the connectivity within the CNS and the corresponding functional significance in the study of the following: ascending sensory system, descending motor systems, spinal reflexes, auditory and vestibular systems, and visual system. The higher integrative function of the CNS will be presented in the study of the hypothalamus, limbic system, and the cerebral cortex. Prerequisites: Enrollment in the M.S. in Medical Sciences Program or permission of course director and program administration. Fall. Letter Grade. Course Director: John Patrickson, Ph.D.
GEBS 552L Introduction to Neurobiology Lab (2 credit hours)
The laboratory section is designed to re-enforce the information presented in the Neurobiology lecture course. Students will have hands-on collaborative laboratory exercises utilizing brain specimens, models, and histological slides of the CNS in conjunction with the laboratory manual. Prerequisites: Enrollment in the M.S. in Medical Sciences Program or permission of course director and program administration. Fall. Letter Grade. Course Director: John Patrickson, Ph.D.

GEBS 553 Introduction to Medical Microbiology and Immunology (2 credit hours)
Upon completion of this course, the student will have a basic understanding of the various microorganisms that can cause disease, their structure, nomenclature, and scientific names. The student will be introduced to the principles of the standard methods for detection and identification of infectious agents. Further, the student will become familiar with standard methods of disinfection and sterilization and the mechanism of action common antimicrobial drugs used in the treatment of infectious diseases. At the end of the section the student will be introduced to the basic functions of the immune system as it relates to infectious diseases. Prerequisites: Enrollment in the M.S. in Medical Sciences Program or permission of course director and program administration. Spring. Letter Grade. Course Director: Michael Powell, Ph.D.

GEBS 600 Advanced Molecular Biology (3 Credit hours)
The objective of this course is to provide graduate students with an understanding of contemporary molecular biology concepts, their application to basic biomedical research and to disease processes. The format includes direct student participation in which each student is required to present assigned research papers as well as to submit summary reports on discussed papers. Prerequisites: Prerequisites: Grade of B or better in GEBS 517 and 517L or permission of course director. Enrollment in an MSM degree program. Fall or Spring. Letter Grade. Course Director: Deborah Lyn, Ph.D.

GEBS 610 Preparing a Research Proposal (1 Credit hour)
The objective of the course is to guide PhD students through grant proposal development and assist them in preparing a predoctoral fellowship proposal which will serve as their dissertation proposal in the MSM Ph.D. in Biomedical Sciences program. A further objective of this course is for students to work with their research advisors to submit their proposal when complete to the NIH for consideration for NRSA predoctoral fellowship funding. Prerequisites: Enrollment in the MSM PhD in Biomedical Sciences program or permission of the program administration. Spring. Pass/Fail. Course Director: Michael Powell, Ph.D.

GEBS 625-630 Technical Apprenticeships I-VI (5 Credit hours each)
This 8-week apprenticeship involves full-time work in service laboratories. MSBT students are required to complete GEBS 625 - 628. Three of these internships must be in MSM core research service laboratories. The fourth, or even a fifth (GEBS 629) or sixth (GEBS 530) may be offsite at another institution or company. Each apprenticeship must culminate in a written summary including detailed experimental protocols for the work performed. Prerequisites: Completion of the MSBT Core curriculum including lab rotations, approval of the student’s Technical Advisor, the host laboratory supervisor, and course director. Fall and Spring. Pass/Fail. Course Director: Michael Powell, Ph.D.
GEBS 650 Community Health Service Learning Practicum (3 credit hours)
Students will complete a mentored health-related service-learning project and develop a health science educational product for credit. Spring. Letter Grade. Course Director: Rita Finley, Ph.D.

GEBS 675 Thesis Research (up to 9 Credit hours per semester)
MSBR students must accumulate a minimum of 12 credit hours of Thesis Research in order to graduate. This course allows students to receive course credit as they collect data for their thesis project as well as while writing their thesis. MS students in their second year of training and beyond register for 9 credit hours total per semester. Thesis research hours reflect the number of hours remaining after any other course credits for that semester are subtracted. To receive credit for Thesis Research, students must submit forms signed by their thesis committee indicating that they have made adequate progress on their thesis research. Prerequisite: Completion of required lab rotations and selection of advisor. Fall and Spring. Pass/Fail. Course Director: Ward Kirlin, Ph.D.

GEBS 700 Cell and Developmental Biology (3 Credit hours)
This course will introduce students to the dynamics of differentiation and embryonic development. Lectures, student presentations, and discussions will familiarize students with one of the most incredible processes in the living world: embryonic development. Prerequisites: Completion of GEBS 517 and 535, and enrollment in an MSM degree program or permission of the course director. Fall. Letter Grade. Course Director: Leonard Anderson, Ph.D.

GEBS 702 Advances in Reproductive Biology (3 Credit hours)
Selected current areas of reproductive biology of interest to the students and faculty will be reviewed by the Faculty and relevant research papers will be assigned for student presentation and class discussion. Prerequisites: Enrollment in an MSM degree program or permission of the course director and program administration. Fall or Spring. Letter Grade. Course Director: Kelwyn Thomas, Ph.D.

GEBS 703 Essential Neuroscience I: Neurophysiology & Neuropharmacology (4 Credit hours)
The course consists of two concurrent blocks of coordinated lectures (Neurophysiology and Neuropharmacology) for graduate students in the second year of study. This elective course is strongly suggested for students focusing on Neuroscience Research and may be required by your research advisor. The goal of this course is to impart to the student a basic, but in-depth, understanding of the major concepts of signal transduction within the nervous system. Coverage will include how ionotropic and metabotropic mechanisms mediate changes in the potential of excitable membranes. Subjects will be taught with a didactic emphasis on experimental design to test hypotheses of critical concepts in the field of Neuroscience. Lectures will include discussion of seminal experiments leading to the key discoveries that serve as part of the foundation of the field. Prerequisites: GEBS 537 or 537-02, enrollment in an MSM degree program or permission of the course director and program administration. Fall. Letter Grade. Course Directors: Morris Benveniste, Ph.D. and Robert Meller, Ph.D.
GEBS 704 Essential Neuroscience II: Systems Anatomy, Function and Neurodevelopment (3 Credit hours)
The course consists of two concurrent blocks of lectures (Systems Structure and Function, and Anatomy and Neurodevelopment) for graduate students in the second year of study. This elective course is strongly suggested for students focusing on Neuroscience Research and may be required by your research advisor. This course will impart to the student a basic, but in-depth, understanding of the anatomical and functional connections in several parts of the nervous system with a focus on input, modulation and output of local circuits. Subjects will be taught with didactic emphasis on experimental design to test hypotheses of critical concepts in the field of Neuroscience. Lectures will include discussion of seminal experiments leading to the key discoveries that serve as part of the foundation for the field. Prerequisites: GEBS 537 or 537-02, GEBS 703, enrollment in an MSM degree program or permission of the course director and program administration. Spring. Letter Grade, Course Director: Morris Benveniste, Ph.D.

GEBS 706 Molecular Mechanisms in Cardiovascular Science (3 Credit hours)
The course will provide students with an understanding of the cellular, molecular, and biochemical mechanisms involved in the field of cardiovascular science. Special emphasis will be placed on reading and interpreting the original literature, integrating information to develop new approaches, and organizing research literature to develop an understanding of the complex issues in cardiovascular science. Prerequisites: Enrollment in an MSM degree program or permission of the course director and program administration. Spring. Letter Grade. Course Director: Leonard Anderson, Ph.D.

GEBS 708 Cancer Biology (3 Credit hours)
This course is designed to provide the background for understanding a number of genetic, cellular, molecular, and biochemical mechanisms involved in different aspects of cancer biochemistry. This course will also emphasize reading and interpreting the primary literature, integrating information to develop new approaches, and organizing research literature to develop an understanding of a complex field. Prerequisites: Enrollment in an MSM degree program or permission of the course director and program administration. Spring. Letter Grade. Course Director: Gary Sanford, Ph.D.

GEBS 749 Supervised Research (up to 9 Credit hours per semester)
This course allows PhD students who have not yet achieved candidacy to receive course credit as they learn methods and collect preliminary data for their dissertation project, as well as while writing their dissertation proposal. Ph.D. students in their second year of study and beyond register for 9 credit hours total per semester. Supervised research hours reflect the number of hours remaining after any other course credits for that semester are subtracted. To receive credit for Supervised Research, students must submit forms signed by their dissertation advisor indicating that they have made adequate progress on their research. Supervised research credits do not apply toward graduation requirements. Prerequisite: Completion of laboratory rotations and selection of an advisor. Fall and Spring. Pass/Fail. Course Director: Doug Paulsen, Ph.D.
GEBS 752-01 Special Topics in Bioinformatics: Pathways Studio® Software (2 Credit hours)
This course is designed to train potential Ariadne Genetics Pathway Studio® users how to effectively navigate and utilize the software. This software analyzes signaling, metabolic and disease pathways from gene-expression or proteomic data input. Using the software provided, the instructor will cover specific aspects of the software in class and assist students during class to understand these steps. An assignment will be given for each class to be turned in for the next class session. Students will submit a final project that covers all of the software features. Prerequisites: Passing grade in GEBS 528 and 528L or permission of the course director and program administration. Fall Letter Grade. Course Director: Gale Newman, Ph.D.

GEBS 753-01 Special Topics in Cardiovascular Research: Population/Evolutionary Genetics (2 Credit hours)
This course is intended to be a narrow survey of genetic aspects of evolution including traditional empirical and theoretical population genetics, medical genetics, ecological genetics and the relationship between microenvironment and macroenvironment. The goal of this course is to help students understand the current state, course of development and likely future directions of population, medical, ecological/evolutionary genetics. Prerequisites: Enrollment in an MSM degree program or permission of the course director and program administration. Fall or Spring. Letter Grade. Course Director: Felix Aikhionbare, Ph.D.

GEBS 753-02 Special Topics in Cardiovascular Research: Bioinformatics Analysis of Epigenetic-Mediated Cell-Specific Genes (2 Credit hours)
Graduate students will be introduced to the major gene expression databases (such as, the NCBI’s gene expression omnibus (GEO) database), along with epigenomic databases (such as the Epigenomic Atlas). This course will provide students with knowledge and experience in using these databases and tools to solve biomedical research problems and allow them to have practical tools for discovering novel genes specifically or preferentially expressed in their cells of interest. This could lead the students to carrying out follow-up studies as part of their research laboratory projects that may confirm the cell-specific expression of the novel gene(s) and define the gene’s role or function in cells. Prerequisites: GEBS 528 and 528L. Enrollment in an MSM degree program or permission of the course director and program administration. Fall or Spring. Letter Grade. Course Director: Methode Bacanamwo, Ph.D.

GEBS 757 Special Topics in Immunology (2 Credit hours)
This is an introductory course in immunology where the students will first learn about basic human host responses. The second half of the course focuses on inflammation, immune function, or dysfunction in the areas of interest to the students, such as infectious and cardiovascular disease, neurobiology and cancer. Prerequisites: Enrollment in an MSM degree program or permission of the course director and program administration. Spring or Fall. Letter Grade. Course Director: Gale Newman, Ph.D.

GEBS 759-01 Special Topics in Neurobiology: Neuronal Electrophysiology (2 Credit hours)
This is an upper level course dealing with electrical signaling within the nervous system. It will discuss the role of ion channels in generating the intrinsic signals found in excitable tissue and will explore the
mechanisms by which neurons communicate with other neurons or target cells. The course will highlight the role of specificity of connections in understanding how information is encoded and processed within the nervous system. Reading of the original literature will be emphasized. Prerequisites: GEBS 535 and 537 or 537-02. Enrollment in an MSM degree program or permission of the course director and program administration. Fall or Spring. Letter Grade. Course Director: Peter MacLeish, Ph.D.

GEBS 759-02 Special Topics in Neurobiology: Cell Communication in Neurodegenerative Disorders (2 Credit hours)
The overall goal of this course is to improve the student’s understanding of cellular communication within the nervous system and its involvement in neuroprotection and neurodegenerative disorders. The objectives include an understanding of the following: (a) Neurotrophic and growth factor signaling; (b) Mechanisms of apoptosis; (c) Neuroprotection; (d) Neurodegenerative disorders. Special emphasis of the course will be on reading and interpreting the original literature. Active participation and targeted follow up projects to topics covered in the reading will be emphasized. In the end, students should have an improved understanding of the field and improved confidence to analyze and critique the conceptual framework and experimental approaches on a number of neuroscience topics. Prerequisites: GEBS 535, 535L and 537 or 537-02. Enrollment in an MSM degree program or permission of the course director and program administration. Fall or Spring. Letter Grade. Course Director: Byron Ford, Ph.D.

GEBS 762-01 Special Topics in Physiology: Biophotonics. (2 Credit hours)
Biophotonics is the science of generating and harnessing light (photons) to image, detect and manipulate biological materials. In modern biomedical sciences, Molecular imaging offers the basis for the extraordinary, non-invasive and quantitative analytical tools useful in the laboratory environment to interrogate biological pathways relevant to systems biology as well as in the diagnosis and treatment of diseases in the clinics. Imaging specific molecules and their interactions in space and time is essential to understand how genomes create cells, how cells constitute organisms and how errant cells cause disease. The excitement and challenge for next generation of biomedical research is to be able to employ biophotonic strategies to solve complex biomedical problems. This elective course will facilitate the thesis research program development. Prerequisites: GEBS 535 and 535L. Enrollment in an MSM degree program or permission of the course director and program administration. Fall or Spring. Letter Grade. Course Director: Xuebiao Yao, Ph.D.

GEBS 764-01 Special Topics in Science Education: Biomedical Genetics Laboratory (2 Credit hours)
This special topics course allows students to earn credit functioning as laboratory teaching assistants (TA’s) where they will be involved in assisting students enrolled in the Biomedical Genetics Laboratory Course. Student laboratory TA’s will enhance their understanding of the use of genetic technologies by having the responsibility of instructing and assisting graduate students with laboratory exercises that include DNA isolation, detection of single nucleotide polymorphisms, insertion deletions and gene expression. Prerequisites: Prerequisites: Grade of B or better in GEBS 528 and 528L and overall B average in MSM degree program or permission of the course director and program administration. Spring. Letter Grade. Course Director: Gale Newman, Ph.D.
GEBS 764-02 Special Topics in Science Education: Human Biology Laboratory (2 Credit hours)
This special topics course allows students to earn credit functioning as laboratory teaching assistants (TA’s) where they will be involved in assisting students enrolled in the Human Biology Laboratory Course. Student laboratory TA’s will enhance their understanding of the structure and function of human cells tissues and organs by having the responsibility of instructing and assisting graduate students with laboratory exercises designed to provide experiences with microscopy, physiology, and educational technology. Prerequisites: Grade of B or better in GEBS 535 and 535L and overall B average in MSM degree program or permission of the course director and program administration. Fall or Spring. Letter Grade. Course Director: Brenda Klement, Ph.D.

GEBS 764-03 Special Topics in Science Education: Biochemistry Laboratory (2 Credit hours)
This special topics course allows students to earn credit functioning as laboratory teaching assistants (TA’s) where they will be involved in assisting students enrolled in the Graduate Biochemistry Laboratory Course. Student laboratory TA’s will enhance their understanding of the basic theories and techniques of a broad range of biochemical and molecular techniques that are currently used in the fast-paced modern biomedical research by having the responsibility of instructing and assisting graduate students with laboratory exercises designed to provide experiences with the equipment and techniques that are the foundations for modern biomedical research. The TA’s will have an opportunity to gain practical teaching and tutoring experiences. Additionally, TA’s will gain experience in organizing and prepping for laboratory exercises, and assessing protocols prior to the actual student lab. Prerequisites: Grade of B or better in GEBS 517 and 517L and overall B average in MSM degree program or permission of the course director and program administration. Fall or Spring. Letter Grade. Course Director: Gary Sanford, Ph.D.

GEBS 766-01 Special Topics in Pharmacology: Essential Pharmacology for Biomedical Research (2 Credit hours)
This course aims to provide students with the basic concepts of pharmacological activity, how drugs work and how genes modify their actions, and to illustrate the importance of pharmacology and drug action in all areas of biomedical science. This course will provide an in-depth understanding of fundamental principles of rational drug therapy and the role of pharmacology in the treatment of common diseases. Prerequisites: Completion of GEBS 517 and enrollment in an MSM degree or permission of the course director and program administration. Fall, Letter Grade. Course Director: Karen Randall, Ph.D.

GEBS 800 Dissertation Research (up to 9 Credit hours per semester)
Ph.D. students must accumulate a minimum of 25 credit hours of Dissertation Research in order to graduate. This course allows students to receive course credit as they collect data for their dissertation project as well as while writing their dissertation. Ph.D. candidates in the dissertation phase of their studies register for 9 credit hours total per semester. Dissertation research hours reflect the number of hours remaining after any other course credits for that semester are subtracted. To receive credit for Dissertation Research, students must submit forms signed by their dissertation committee indicating that they have made adequate progress on their dissertation research. Prerequisite: Ph.D. Candidacy. Fall and Spring. Pass/Fail. Course Director: Gary Sanford, Ph.D.

Assistant Dean for Graduate Education in Public Health and Director, Master of Public Health Program:  Stephanie Miles-Richardson, DVM, PhD

Degree Academic Advisor & Mentor:  Elaine Archie-Booker, EdD

Non-Degree Academic Advisor & Mentor:  Reinetta Thompson Waldrop, MSHS, FACHE

External Relations Coordinator:  NyThea Tolbert, MPH

**History of the Program**

Recognizing the need to strengthen the development and delivery of public health services to minority and medically underserved communities, in 1992 Morehouse School of Medicine (MSM) conducted a feasibility study to develop a Master of Public Health (MPH) Degree Program.

The MPH program, established in 1995, is one of the institution’s five academic programs. The program is a centrally located academic program within the institution and is located in the National Center for Primary Care. The first student cohort was admitted in fall 1995 and the first MPH degree was awarded in spring 1997.

The program focuses on providing unique opportunities for students to become engaged in community-based participatory research, student-directed learning, problem solving, and the development of skills and competencies essential to the practice of public health.

An important element in the development of the program was the insertion of a strong community component established through faculty collaboration with public health agencies, non-governmental organizations and community-based organizations. These domestic and international partners incorporate student training and job placement opportunities within their agencies. Since 1995, MPH students have completed practicum experiences with local, state and federal agencies, national and international community organizations, and non-governmental organizations. In addition to the practicum, students are involved in community service activities.

Morehouse School of Medicine also offers the dual MD—MPH degree program. The MD—MPH option at MSM provides an outstanding educational opportunity for training physicians to address the health needs of communities and populations as well as individuals. To learn more, refer to the “MD—MPH Dual Degree” in the MD Program section.

**Accreditation**

The MPH program was first accredited by the Council on Education for Public Health (CEPH) in 1999, making MSM the first historically black college/university, with an accredited MPH program. In 2007, the program earned a maximum seven-year term re-accreditation period (October 27, 2007 to December 31, 2014) from CEPH.
Program Mission and Goals

Mission
The mission of the MPH program is to prepare individuals who will organize and implement programs to improve the health, quality of life and well-being of communities and people, through education, research and service in public health. The program has a particular emphasis on people of color, minorities and other underserved populations.

Goals

Instruction
Goal I: Provide students the education, skills, abilities and values to address the public health needs of communities and regions in the US and other global, nations with a particular focus on underserved populations.
Goal II: Prepare graduates for leadership in the Public Health field.
Goal III: Increase the representation of African Americans and other underrepresented populations in the Public Health professions
Goal IV: Promote life-long learning through continuing public health education.

Research
Goal V: Discover, develop, and advance knowledge through basic and applied research in problems that disproportionately affect underserved populations.

Service
Goal VI: Collaborate with local, regional, state and international communities to improve the health and well-being of their underserved populations.
Goal VII: Improve and impact public health policies and practices in order to promote health and decrease health disparities among minority and other underserved populations.

Governance

The Academic Policy Council (APC) establishes academic policy for the School of Medicine. The APC consists of all department chairs, the Director of the Library, two elected student representatives, and two elected faculty representatives. The faculty standing committee of the MPH Program is the Graduate Education in Public Health (GEPH) Committee which is a subcommittee of the APC. The subcommittees of GEPH are Admissions, Curriculum, and Student Academic Progress.

Graduate Education in Public Health (GEPH): This committee shall oversee the program of study leading degrees or certificates in Public Health education. It is the responsibility of the Committee to make policy recommendations concerning admissions, curriculum, evaluation, graduation, progress, remediation and the possible waiver of course work towards awarding of the MPH degree and public health certificates. It shall also recommend individuals to the APC who will be awarded these degrees. This committee has subcommittees for Admissions, Curriculum and Student Academic Progress.

Admissions Committee: The Admissions Committee is responsible for the acceptance of all students entering the MPH program.
**Curriculum Committee:** The Curriculum Committee is responsible for the development of a program curriculum that will lead to the fulfillment of the objectives of the program.

**Student Academic Progress Committee (SAPC):** The SAPC Committee is responsible for monitoring the academic performance of each MPH student.

**MPH Advisory Committee:** The MPH Advisory Committee is an external body comprised of representatives from community health agencies, members of the Atlanta University Center schools, public health agencies, alumni, and student representatives. The MPH Advisory Committee currently has three primary roles:

1. Provide expert advice and guidance in all aspects of the MPH program, including recruitment, mentoring, curriculum and development.
2. Facilitate and promote involvement and collaboration with key partners in the community, government health agencies at the federal, state and local levels, private health partners and foundations, and representative from the broader corporate community.
3. Assist the MPH program in describing and articulating opportunities for collaboration within the broader academic system in Georgia.

**Community Service**

There are ample opportunities for student engagement within the community through participation in service-related activities and community planned events. The Program’s core courses equip students with foundational knowledge and concepts essential for them to better understand the needs of the populations they serve. Additionally, the Community Health Assessment & Improvement (MPH 508) course and required community service hours ensure a strong service-learning component to our MPH Program. Students are exposed to numerous opportunities for active participation in community service.

**Student Organization**

The Master of Public Health Student Association (MPHSA) is administered entirely by students. The primary function of the organization is to provide students with a greater degree of participation in decision-making processes of the Program. The MPHSA elects officers each Spring who serve a one-year term. Students are selected by the Association to serve as full members on various program and academic committees in the development of curriculum and administrative policies of the program. MPHSA is a member of the MSM Student Government Association. The MPHSA is actively involved with the American Public Health Association.

**Alumni Association**

All MPH graduates attain membership in the MSM Alumni Association upon graduation. The purpose of the Alumni Association is to promote the welfare and interest of the School of Medicine and support and advance graduate education for public health. The MPH Alumni have also developed a Morehouse MPH Alumni list-serve.

**Additional Publications**

**MPH Publications**

The following publications also contain additional information for MPH students:
Master of Public Health Program

- **MPH Program Course Schedule Listing**: The listing, published each semester, includes course titles, numbers, instructor, time, course hours, day, and location of courses, and is available in the MPH Program office and the MSM Registrar’s Office.

- **Practicum Experience Guidelines**: The guide outlines policies, procedures, responsibilities, planning, and implementation of this course. Appendices include forms, summaries and a glossary.

- **Culminating Experience Guidelines**: The guide explains policies and procedures for conducting the student research experience. Descriptions of thesis and manuscript guidelines are included. Appendices include sample forms, statement and checklists.

- **MPH Student Handbook**: On admission to the program, all students receive a copy of the MSM Student Handbook which contains institutional policies and procedures relevant to student life. Copies are distributed at Registration by the Registrar’s Office.

**Application Requirements**

**Application Requirements for the Master of Public Health Degree**

Individuals interested in applying to the MPH Program should meet all of the following requirements:

- Completion of a bachelor’s degree, or equivalent, from a U.S. school accredited by a regional accrediting organization recognized by the Council for Higher Education Accreditation (CHEA) or the U.S. Department of Education, or from an appropriately accredited non-U.S. institution is required. Official transcripts from each undergraduate and graduate institution are required. Applicants who have completed coursework at, or hold a bachelor’s or advanced degree from an institution of higher learning outside the United States must have their transcript(s) certified for equivalency to U.S. degrees or coursework by a credential evaluation service that is a member of the National Association of Credential Evaluation Services (NACES). Applicants who have completed coursework at, or hold degrees from, a postsecondary institution in Australia, Canada (except Quebec), New Zealand, or the United Kingdom will normally not need to have their academic transcripts evaluated and certified for equivalency.

- Official Graduate Record Examination (GRE) scores (from within the past five (5) years)

- Personal narrative statement (two to three pages) answering specific questions

- Three letters of reference

International applicants are also required to submit:

- Test of English as a Foreign Language (TOEFL) for foreign students whose first language is not English. A passing score on the ECFMG English test is acceptable for foreign medical graduates.

Applicants with a terminal professional degree who have an active professional license in their field are exempt from test scores. Applicants who do not possess an active professional license in their field must submit their doctoral transcripts.

Applicants must submit a completed application in order to be considered for a personal interview. Completed applications consist of the application form, a $50.00 non-refundable application fee, photograph, official transcripts, official test score reports, personal narrative statement, and reference letters. International applicants...
are required to submit TOEFL/ECFMG English test scores and a Silny or WES evaluation of foreign academic credentials.

Application Requirements for MD-MPH

Applicants, who are interested in the dual MD—MPH degree, must be admitted to the MD program in order to be eligible for the MPH Program. MD—MPH applicants will be required to complete the MPH application. Application fees for the MPH application will be waived. Letters of recommendation from the completed MD AMCAS application will be used for the MD—MPH application. The MCAT will replace the GRE for MD—MPH applicants only.

Current MD students who did not declare an interest in the MPH program at the time of admission can apply for the MPH program as they enter into their third year. Current MD students will be required to complete the MPH application and submit two letters of recommendation from MSM faculty. Application fees for MD—MPH applicants will be waived. Acceptance into the MPH program is contingent upon the passing of Step 1 of the US Medical Licensing Exam (USMLE). Students must also be in good standing, academically and professionally. Dismissal from the MD program based on academic performance or professionalism will result in automatic termination from the MPH Program. The Special Status Student option is not available for MD—MPH students.

Application Requirements for MPH/Preventive Medicine Residents

Individuals interested in applying to the Public Health and Preventive Medicine Residency Program should meet all of the following requirements:

- Complete at least one year of supervised clinical training in a primary care specialty that is accredited by the Accreditation Council for Graduate Medical Education (ACGME)
- Pass Steps 1, 2 and 3 of the United States Medical Licensing Exam (USMLE)
- Meet eligibility for an un-restricted Georgia medical license. For more information, call the Georgia Board of Medical Examiners at (404) 656-3913
- Residency applications will only be accepted through the Electronic Residency Application System (ERAS)

All applicants without an MPH degree should submit an online application to the Morehouse School of Medicine MPH Program. In addition to the application, the following must also be submitted:

- Official transcripts from all undergraduate and graduate institutions
- Personal narrative statement (two to three pages) answering specific questions, as outlined in the Morehouse School of Medicine MPH Program application
- Three letters of reference, one of which must be written by a previous residency director
- Documentation of at least one completed year of supervised clinical training in a primary care specialty that is accredited by the ACGME
- Scores from USMLE
- An un-restricted Georgia medical license or licensure in another state
MASTER OF PUBLIC HEALTH PROGRAM

MPH/PM applicants are exempt from GRE test scores with proof of a license to practice medicine. Application fees for MPH/PM applicants will be waived. Acceptance to the residency program is contingent upon admission to the MPH program.

**Application Deadline:** MPH/PM applicants are eligible for Fall admission only.

**Application Requirements for Special Status Students**
The following information must be submitted in addition to the online application:

- Official transcripts from all undergraduate and graduate schools attended. (Refer to the first bullet under “Application Requirements for the Master of Public Health Degree”)
- Personal narrative statement (one page) answering a specific question
- Three letters of reference

**Application Deadlines**
- Regular Full-time and Part-time students: March 1
- Special status students: June 1

Prospective students may apply over the Internet by visiting the Morehouse School of Medicine website at http://www.msm.edu, selecting the “Admissions” link, and then selecting “Apply Online”.

Additional information about application materials and the admissions process may be obtained by calling the Office of Admissions and Student Affairs at (404) 752-1650, sending an email to MPHadmissions@msm.edu, or sending your request to:

Morehouse School of Medicine
Office of Admissions and Student Affairs
720 Westview Drive SW
Atlanta, GA 30310-1495

**Degree-Seeking Applicants**

**Full-time and Part-time Study**

Graduate students who register for 9 or more credit hours in the Fall or Spring terms are considered full-time students. A minimum of 12 credit hours per semester is required to complete the degree in two years. All students are billed on a per credit hour basis (see MSM Student Handbook for current rate). Students who register for fewer than nine credits are part-time students. Admission procedures for part-time students are the same as those for full-time students. Students who wish to register for more than 15 credits per term must obtain permission from their Academic Advisor.

Acceptance to the MPH program is based on the profile of the applicant. This profile includes: academic qualifications, work experiences, community or volunteer service, career goals, and the relative strength of each applicant compared to the current pool of applicants.

The MPH Admissions Committee makes the final selection and notifies accepted applicants. All applications, transcripts, test scores and letters of reference are housed in the MSM Office of Admissions. An application will not be considered until all materials (including test scores) have been received.
International Applicants

There are additional requirements for international applicants which are available online. Only U.S. citizens or permanent residents qualify for financial aid. All others must provide proof of financial support.

Non-Degree-Seeking Applicants

Special Status Student

The Special Status Student program is for one year (2 semesters). Special Status Students are only permitted to take core courses. The maximum coursework permitted by students enrolled as Special Status is 13 credit hours (5 courses). Grades of B or higher earned by a student while in this category can be subsequently applied towards the degree. Any courses with a grade below B cannot be applied towards the degree. Remediation is not an option for Special Status Students. The course must be repeated and will remain on the transcript and factor into the grade point average. Graduate coursework completed by a Special Status Student at MSM will be considered as residence credit and, upon approval of the MPH Program Student Academic Progress Committee (SAPC) may be used with the above limitation as credit toward the MPH degree.

Cross-Registration

Cross-registration is available between several local graduate institutions. Contact the MSM Registrar’s office for additional information.

Academic Regulations

Weekly class attendance including all examinations and other evaluation activities is mandatory. Excessive absenteeism may be deemed grounds for course failure or dismissal from the MPH program. Excused absence from an examination must be obtained prior to the examination or upon acceptable documentation of an emergency at the time of examination. An unexcused absence from a test or examination can result in a failing grade for that portion of the course.

All requirements for the MPH degree must be completed within five calendar years of commencing the program. Leave of absence and withdrawal from the program will be granted in accordance with the guidelines set forth in the MSM Student Handbook. If a student withdraws or takes a leave of absence while on academic probation, the probationary period resumes upon return.

Each student’s continued enrollment in the MPH program is contingent upon academic progress and the demonstration of conduct consistent with high standards of professionalism and personal honesty.
Grading System

</table>

D is not a letter grade used in the MPH program’s grading system.

*Indicates grade not included in the calculation of a student’s grade point average (GPA).

Cumulative grade point averages will be calculated each semester. The GPA is computed by (1) multiplying the points earned by the course credit hours; and (2) dividing this product by the total number of semester hours carried. The minimum standard for graduate work leading to the Master of Public Health degree is a B average (3.0 GPA). Only grades of A and B may be modified as A-, B+, B-.

No course credit will be allowed for an F, W, WF, IP*, or I. When a course, seminar, or research activity is intended to last more than one semester, the notation IP* (In Progress) is made at the end of each grade period until the final grade is given. When assigned work is not completed during a prescribed period, the notation “I” may be given with consent of the instructor. If the work is not satisfactorily completed within the time allowed by the instructor, up to one year, a final grade of F is given.

Advisement

**MPH Student Advisement Process**
The academic advisement process is intended to ensure that all students receive guidance and direction in completing the prescribed plan of study. Regular Status Students are advised by the Degree Academic Advisor &Mentor. Special Status Students are advised by the Non-Degree Academic Advisor & Mentor. Students follow a prescribed Course Enrollment Sequence that documents their curriculum plan for their matriculation in the program.

Prior to the beginning of the following semester, each student meets with their Academic Advisor & Mentor and revises the Course Enrollment Sequence, if necessary. At this time, students register for classes.
As required course work is completed, the student and External Relations Coordinator jointly develop plans for the completion of the Practicum Experience. The Culminating Experience (CE) Course Director will advise students. SMEs advise students on CE policies and procedures.

The External Relations Coordinator and Academic Advisor & Mentor also inform students of opportunities for fellowships and grants, consult with students on continuing their education, and provide students with job announcements and information on career opportunities. Information on these and additional opportunities is available in the Career Development Office.

**Academic Program**

The MPH Program offers a comprehensive curriculum consisting of a core courses (28 credit hours) and elective courses (14 credit hours). In addition, all students must complete a Practicum (3 credit hours) and Culminating Experience (3 credit hours), attend Career/Personal Development Workshops, Academic Writing Workshops, and a total of twenty Public Health Roundtable Series.

**Course Offerings**

Core Courses (28 credit hours): All students are required to complete the following core courses:

**MPH 500 Biostatistics (3 credit hours)**
This course introduces various statistical methods used in public health management, research, and education. Students are trained in biostatistical data analysis and the interpretation of standard statistical packages.

**MPH 501 Introduction to Environmental Health (3 credit hours)**
This course introduces all students to the fundamentals of environmental health sciences. It is designed to enable students to recognize environmental health problems, initiate assessments, and communicate with other professionals and the lay public regarding environmental health issues.

**MPH 502 Epidemiology (3 credit hours)**
This course provides students with knowledge of patterns of disease occurrence in human populations and factors that influence these patterns. The course is designed to enable students to identify and use systematic procedures that are helpful in determining epidemiological relationships. Students will gain insight and be able to recognize situations in their public health practice where epidemiological principles are to be applied.

**MPH 503 Health Administration, Management, and Policy (3 credit hours)**
This course provides an introduction to major issues in management of health programs and services. The course exposes students to an overview of the theories of management and administration. Specific aspects of health service delivery, policy and management are explicated with emphasis on the role of the manager in contemporary health systems.

**MPH 504 Social and Behavioral Aspects of Public Health (3 credit hours)**
This course provides a survey of the socio-structural, cultural, micro-ecological, and personal determinants of human behavior. This core course provides students with a general appreciation of the central role that human behavior plays in the development and prevention of illness and in the promotion of health. Specific interventions targeted at African Americans are presented to illustrate these theoretical constructs.
**MPH 505 Fundamentals of Public Health (1 credit hour)**
The interdisciplinary foundation course for first-year MPH students is designed to improve their analytical and practical skills in the fundamental principles (values and ethics) and core competencies in domestic and global public health issues. The course integrates theory and practice as important characteristics of learning and includes presentations by public health professionals, films, site visits, case studies, and individual and group presentations of assigned projects.

**MPH 506 Research Methods (3 credit hours)**
This course is designed to provide an overview of qualitative and quantitative research methodologies and provide practical experience for students to apply skills learned. Qualitative research methods will be taught and practiced as a way of further understanding the deeper meaning and context of attitudes, beliefs and behaviors within communities and as related to program design and outcomes. This course is designed to assist students with the Culminating Experience Requirement.

**MPH 507 Grant and Proposal Development (3 credit hours)**
The course is designed to familiarize students with specific written and oral communication skills needed to develop competitive grants and proposals for international health programs, public programs and community-based organizational settings. The course incorporates a focus on cultural competency while establishing fundamental proposal development skills that facilitate public health practice.

*This course is specifically for students who entered the program prior to Fall 2012. This course will not be offered in the 2013-2014 academic year.*

**MPH 508 Community Health Assessment & Improvement (3 credit hours)**
*Prerequisite: MPH 505 Fundamentals of Public Health*
This course examines methods of community health assessment, planning, implementation, evaluation and ways for improvement. Students learn to develop or adapt a health promotion program that reflects cultural competence, analyze types of program evaluations that can be used for a health promotion program and create written materials to support a health promotion program. Building on the core competencies of public health, the course will include team-building activities, lectures, engaging with community emergency responders and community organizing and service.

**MPH 509 Global Health Systems (3 credit hours)**
This course is designed to allow students to examine health systems from a global perspective, and understand approaches to evaluate and recommend improvements to their performance. The course focuses on historical overviews of health systems in developed and low and middle income countries and their attempts to address health related issues, including the burden of disease, vulnerable populations, and disaster management. In particular, an extensive overview of the financial, organizational, and professional complexity of the U.S. healthcare delivery system is presented.

**MPH 510 Health Program Planning & Evaluation (3 credit hours)**
This course introduces students to quantitative, qualitative, ethnographic methods of quality measurement and improvement in public health and economic evaluations of programs. Students will learn formative and summative program evaluation methods explore public health standards for conducting program evaluation and introduce student to the principles and practices of healthcare finance as it relates to economic evaluations of programs.
Other Required Courses (6 credit hours)

MPH 690 Practicum Experience (3 credit hours)
Prerequisite: MPH 508 Community Health Assessment & Improvement
This course provides students with worksite experience (360 practical hours, 120 community service hours – 480 total) at a public or private health service organization in the U.S. or abroad during the summer (May-August). Students apply classroom theory and competencies to practical situations in the field. This course also helps students identify needed job skills and possible work opportunities in their area of specialization. Students are required to successfully complete four core courses and two track required courses prior to starting their Practicum Experience. Arrangements can be made for part-time students in the spring and fall semester.

MPH 691 Culminating Experience (3 credit hours)
Prerequisite: MPH 506 Research Methods
This course provides an opportunity for students to synthesize and integrate the knowledge base and competencies acquired in coursework and practicum. Students can demonstrate this achievement through writing and presenting a master’s thesis or manuscript which is submitted to a pre-selected Public Health or Public Health related journal.

MPH 695 Career/Personal Development Workshops (0 credit hours)
These workshops provide technical skills required to lay the foundation for proficient performance in the job market. Professional success mandates effective marketing of skills, knowledge and abilities for new opportunities. Professional and career development training classes are the critical elements to a successful career.

MPH 699 Public Health Lecture Series (0 credit hours)
These lectures expose students to innovative leaders in public health who explore a variety of issues and strategies used in public health and provide a forum for exchange on contemporary practice and theory. Local, regional and national leaders present on selected topics and students interact in a roundtable format. Students must attend five seminars per semester for a total of 20 to meet the graduation requirements. Verification of attendance is required for graduation.

Electives (14 credit hours)

MPH 517 Statistical Computer Methods I (3 credit hours)
Prerequisite: MPH 500 Biostatistics
This course provides intermediate level of SAS and SPSS to gain proficiency in the use of data management, processing and storage, manipulation and retrieval of data and statistical summaries are emphasized.

MPH 534 Health Communications (3 credit hours)
This course is intended to complement courses in social and behavioral approaches to community health. This includes the intervention core in Community Health Education and the social and behavioral science perspectives in MPH programs in general. This course is primarily a critical review of theory, research, and applications of mass media in public health but also includes discussion of planning principles in developing media-based public health interventions. (Fall)

MPH 535 Public Health Emergency Preparedness and Disaster Management (2 credit hours)
This course provides an overview of the fundamentals of emergency preparedness and disaster management at the local public health department level. Course instruction will blend the application of management theory with practical applications and students will learn how to develop and effectively implement disaster
preparedness plans. Through this approach, students will strengthen their knowledge of emergency preparedness and the management of public health disasters that may be terrorist, biological, or chemical in nature.

MPH 536 Biostatistical Methods (3 credit hours)
*Prerequisite: MPH 500 Biostatistics*
This course covers the fundamental aspects of experimental design as well as regression and multi variant analysis. This course builds on MPH 500 Fundamentals of Biostatistics.

MPH 632 Introduction to Spirituality and Health (2 credit hours)
This course is designed to introduce students to the shift in paradigm of the relationship between spirituality and healing. Historically, the roots of these disciplines were intertwined but the current atmosphere in the United States emphasized the separation of religion and medical care. A review of the history of the relationship between these two disciplines will be addressed with a focus on the central role that spirituality and healing have in the life of a community.

MPH 636 Introduction to Correctional Health – Reentry: The Civil Rights Issue of Our Time (2 credit hours)
This introductory course will provide a core understanding of corrections as it relates to public health professionals and the issues of reentry. Topics to be covered include: public health issues in corrections; overview of the correctional system; risk assessment; correctional epidemiology; health promotion; social justice; and the role of communities in policy and decision making. Core topics will lay a foundation for evaluating the public health implications within the field of corrections locally, and nationally.

MPH 693/694 Directed Study (1-2 credit hours)
Directed Study is an MPH course in which students pursue independent research under the guidance of a MSM faculty member. Students can complete a Directed Study to pursue in-depth research in a general area covered in a course, or to explore a topic not normally covered in the curriculum.

MPH 701 Advanced Epidemiology (3 credit hours)
*Prerequisite: MPH 601 Intermediate Epidemiologic Methods*
This course provides a broader and more in depth presentation of epidemiologic concepts and methods with the aims of advancing epidemiologic reasoning abilities and enhancing proficiency for epidemiologic research and practice. It provides a more rigorous presentation and discussion of specific epidemiologic concepts, methodologic issues, and principles which underlie analytical techniques for advancing scientific inquiry and program decision making.

MPH 702 Cancer Epidemiology (2 credit hours)
The goal of this course is to provide an overview of the important concepts and tools fundamental to the understanding, design, and conduct of cancer epidemiology studies. It will provide an overview of the biology of cancer, as well as the major epidemiologic concepts critical to cancer epidemiology. We will study many of the major cancer sites, including breast, lung, colon, prostate, cervix and melanoma, reviewing descriptive data on incidence and mortality, risk factors, and methodological issues involved in studying these cancers. We will review several major risk factors for cancer, including tobacco, nutrition, infections, and environmental exposures.

MPH 703 Disability, Racial and Ethnicity Related Disparity in Public Health (2 credit hours)
Historically, the examination of health disparities has focused on racial and ethnic, income, and geographic influences. This course broadens the study of health disparities by extending the analysis to include people with
intellectual and physical disability. The major goal of this course is to examine the disparities at the intersection of disability and racial identity. The primary focus will be on health – in its broad construction of supporting quality of life. We will examine this in the context of major life activities, such as health care and screening, sexual health, obesity, and oral health. We will also examine critical areas of dual disparity such as institutionalization, substance use, housing, employment, and hate crimes. By increasing course participants’ level of awareness, these future public health professionals will be empowered to appropriately advocate for people with disabilities within the policy and practice arena of health care.

**MPH 704 Introduction to Cancer Prevention & Control (2 credit hours)**
Cancer is the second leading cause of death in this country, making its prevention and control important in public health practice. This urgency is exacerbated by the existence of racial/ethnic disparities in cancer incidence, morbidity and mortality. Using an integrative, collaborative and translational approach, this course is designed to examine concepts, methods, issues, and applications related to cancer risk reduction. Students will gain access to a broad perspective of scientific and public health practices. The spectrum of research and practices including diet and diet-related lifestyle factors (such as weight and physical activity) and tobacco (including prevention/cessation), will be studied in detail.

**MPH 705 The Politics of Health Care Policy (3 credit hours)**
The course has two primary goals – teach MPH students (1) that the formation of health care policy is a political exercise and (2) how politics – primarily the concern of politicians to be elected and re-elected – influences the formulation of health care policy. By having a better understanding of and appreciation for the politics behind health care policy, MPH students will be more effective advocates for policies and programs they might support or champion over the course of their careers. To that end, one of the key assignments of the class will be to write an outline and present to the rest of the class what ideal health care policy would look like. At the end of the semester, students will do a follow-up project, including a written product and a subsequent presentation, that evaluates the political concerns that would have to be addressed to make their ideal health care policy a reality.

**MPH 706 Principles of Leadership in Public Health (2 credit hours)**
This course is designed to develop leadership and managerial competencies relevant for work in public and private health care agencies and community-based organizations. The primary purpose is to improve students’ understanding of how leadership impacts various domains of public health and to assess and develop their personal leadership competencies. Through active engagement in class presentations students will learn leadership styles and skills, group and project management skills, and analytic competencies needed by leaders for problem solving.

*Morehouse School of Medicine reserves the right to terminate or modify program requirement content, and the sequence of program offerings from semester to semester or year to year, for educational reasons which it deems sufficient to warrant such actions.*

*Further, MSM reserves the right to terminate programs for financial or other reasons which it determines warrant such action. The content, schedule, requirements, and means of course presentation may be changed at anytime by the School of Medicine for educational reasons which it determines are sufficient to warrant such action. Programs, services or other activities of the School may be terminated at any time due to reasons beyond the control of the School including but not limited to, acts of God, natural disasters, destruction of premises, labor disturbances, governmental order, financial insolvency, or other reasons or circumstances beyond the control of the School of Medicine.*
Morehouse School of Medicine
Financial Information

Tuition and Fees

Tuition and fees for each academic year are set in March of the preceding year by the Board of Trustees. Amounts are published in the Student Handbook and are available from the Office of Admissions and Student Affairs. MSM reserves the right to change the fees and tuition at any time without notice. However, if a change is made, it will not become effective until the next academic year.

Registration and Payment of Tuition, Fees and Other Financial Obligations

Tuition and fees may be paid in two installments. The first installment is due on the day of registration. The final installment is due in January or on the date listed on the promissory note. Registration dates are specified in the calendar published in the student handbook. Failure of the student to register on or before the date specified in the published calendar will result in a late registration fee of $50.00 which will be added to the amount due. A student will not be allowed to register until tuition and fees are paid or satisfactory arrangements are made to cover all expenses. A student who has not satisfied all past due financial obligations to MSM will not be allowed to register until all accounts are settled. No transcripts will be released for any student or former student, nor will any degree be awarded to any student who has a financial obligation to the school.

Tuition payments and account payments carry a service charge if a check is returned for insufficient funds, or if payment is stopped on the check. Any returned check must be cleared within seven (7) days. Registration will be withdrawn if a student fails to satisfy all financial obligations to the school.

Refund Policy

If a student leaves the medical school for any reason (dismissal, withdrawal, transfer) tuition is refundable according to the following decreasing percentage scale:

<table>
<thead>
<tr>
<th>Period After Registration</th>
<th>Tuition Refunded</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 5 Class Days</td>
<td>100%</td>
</tr>
<tr>
<td>Second 5 Class Days (2 weeks)</td>
<td>80%</td>
</tr>
<tr>
<td>Third 5 Class Days (3 weeks)</td>
<td>60%</td>
</tr>
<tr>
<td>Fourth 5 Class Days (4 weeks)</td>
<td>40%</td>
</tr>
<tr>
<td>Fifth 5 Class Days (5 weeks)</td>
<td>20%</td>
</tr>
<tr>
<td>After the Fifth Week</td>
<td>0</td>
</tr>
</tbody>
</table>
Should a medical student need to decelerate in the curriculum such that the anticipated graduation date is changed, the tuition and fee charges will be pro-rated accordingly.

**Financial Assistance**

The ability to finance your education at MSM does not influence the admissions process. However, if the student cannot make satisfactory arrangements to pay tuition and fees and to provide living expenses, the registration process cannot be completed. Students who have documented financial need that cannot be met by family and personal resources may apply for scholarships, loans, and grants. The Office of Student Fiscal Affairs is prepared to assist applicants and students in preparing applications for financial aid.

Accepted and alternate list students will receive the link to the online institutional Loan/Scholarship Application, a Needs Analysis Form (Free Application for Federal Student Aid, FAFSA), and other necessary financial aid information and instructions. An official, signed copy of the parent’s and applicant’s current U.S. individual income tax return is required for students who wish to be considered for institutional financial aid (i.e., grants, scholarships, low interest loans). Complete parent information must also be provided on the FAFSA. All information is held in strict confidence. The policies of the institution in regard to financial aid are contained in the Financial Aid Prospectus, which is available on the MSM website.

Many donors have generously provided grants, scholarships and other forms of financial aid for MSM students who qualify for such assistance. These funds are considered institutional financial aid and are awarded based on financial need (according to the Needs Analysis Form) to students who meet the financial aid deadline and provide complete parent income information. Students who wish to apply for private loan funds (alternative loans) will be subject to a credit check by the lender (bank).

**General Policies**

**Academic Records**

Official academic records are maintained by the Registrar. Access to these records is governed by the Family Educational Rights and Privacy Act of 1974, as amended. A listing of all students’ records maintained by the institution is contained in the Student Handbook, which is available from the Office of Admissions and Student Affairs.

**Library**

The Morehouse School of Medicine Library supports excellence in teaching, learning, research, service and practice by acquiring, developing, managing and delivering information resources to Library users. It is physically located on the first floor of the Medical Education Building (MEB), provides information and learning resources for students, residents, faculty, staff,
researchers, and the community. The Library has areas for group and individual study. All Library areas have Wireless Network Access. In addition to online, full-text books and journals, along with open stacks of books and journals, the Library houses an archive, audiovisual collection, and electronic laboratory. The Library also provides intranet access to information resources and support and guidance in the selection, access, and use of these resources. Librarians are available to assist in training users to effectively use Library resources to answer reference queries and to perform searches for information. The Library is a resource member of the National Networks of Libraries of Medicine Southeastern Atlantic Region (NNLM/SEA), the Consortium of Biomedical Libraries in the South (CONBLS), the Southern Chapter of the Medical Library Association (SCMLA), the Georgia Health Sciences Library Association (GHSLS), the Atlanta Health Sciences Library Consortium (AHSCLC) and the Atlanta Regional Council for Higher Education (ARCHE).

**Community Service**

Central to the mission of MSM is the expectation that graduates will provide service to disadvantaged communities. In addition to emphasizing this point in our pedagogy, MSM students participate in a series of community service projects prior to their graduation. The program also provides an opportunity for undergraduate students who are interested in pursuing careers in medicine and the biomedical sciences to develop mentoring relationships with medical students from MSM.

Medical students actively participate in the Medical Post Program, where they meet regularly with high school students interested in healthcare careers. They also make frequent classroom presentations in local schools, serve as volunteers in community health programs, participate in career days, and serve as judges at science fairs.

The Student Sight Saver Program (SSSP) is one of the Friends of the Congressional Glaucoma Caucus Foundation’s three core projects. Through this program, the students, advised by the Director of Student Activities, and led by a Student Sight Saver coordinator, learn about new techniques in screening and detection, and new treatments for diseases of the eye. In just the first year, the Morehouse School of Medicine SSSP screened close to three hundred people and conducted twelve screenings with an ophthalmologist on-staff as well as other Morehouse School of Medicine medical physicians.

Honors in Community Health and Service selects students in high academic standing for the program based on an interest in community service, faculty recommendations and academic performance. Students perform a specified number of community service hours each year, identify a service project relating to their professional interest, and develop personal and community learning objectives. Working with a faculty advisor and a community site, students develop, implement and later present their scholarly project before faculty and peers. Students are recognized on class day and receive honors at graduation.
Drug-Free School

Purpose

To promote a drug-free workplace in all School-owned, leased or operated facilities.

Responsibility

Under the direction of the President, the Dean, Associate Deans and Vice Presidents, will ensure compliance with this policy. All individuals with supervisory responsibility shall implement this policy.

Policy

1. Guidelines: It is the policy of MSM that the unlawful manufacture, distribution, dispensation, possession, sale, processing or use of any controlled substance by faculty, staff or students is prohibited while on School property or while on School business. Consequently, anyone found to be in violation of federal, state, local and/or School policy will be subject to disciplinary action up to and including termination or expulsion. DEFINITION: A controlled substance is any chemical for which there are explicit regulations regarding its manufacture, distribution, dispensation or use.

Therefore, in accordance with the Federal Drug-Free Workplace Act of 1988, all School employees and students must, as a condition of employment or enrollment, (i) abide by the school policy on controlled substances, and (ii) inform the School in writing of any conviction for violation of a criminal drug statute, when violations occur in the workplace, no later than five calendar days after such conviction. The School must then notify any grant or contracting agency of the conviction within ten calendar days of notice from employee or student, when the employee’s/student’s salary is paid from a federal grant or contract. The employee/student agrees that as a condition of receiving a federal grant or contract the employee/student will not engage in the unlawful manufacture, distribution, dispensation, possession, or use of a controlled substance in conducting any activity with such federal grant or contract.

2. The School recognizes the accepted professional definition of addiction. Addiction is a harmful complex bio-psychosocial, primary disease, characterized by the progressively debilitating, compulsive use of a mood altering substance at the expense of one’s values, goals, vocation, family and social life.

3. Any employee or student convicted of a violation of a criminal drug statute or involved in illegal use or abuse of any controlled substance, may as a condition of continued employment or enrollment, be required to participate satisfactorily in a drug abuse assistance or rehabilitation program approved for such purposes by a federal, state, local, health, law enforcement, or other appropriate agency. The School offers counseling and referral assistance via an Employees Assistance Program (EAP) provided by an external source or an internal student counseling service. The employee’s supervisor, School’s EAP Liaison (Discrimination Harassment Officer),
GENERAL INFORMATION FOR STUDENTS

Associate Dean for Student Affairs, and/or the Assistant Vice President for Human Resources will make the necessary referral(s) to the EAP or Student Counseling Services. Department directors, supervisors, or employees who are affected by illegal use or abuse of drugs are responsible for notifying the EAP directly, or contacting the EAP Liaison at (404) 752-1846.

4. Employees who are concerned about a substance abuse problem may contact the EAP directly, or may be referred by a supervisor concerned with the employee’s substandard performance. Preliminary substance abuse counseling and referral is available through the EAP. Employees will be seen individually for assessment, referral and treatment as required. Follow-up contacts will be available as necessary to meet the employee’s needs.

5. There is no cost to employees who contact the EAP for services rendered by its counselors. However, there may be some costs incurred when referrals are made to outside clinics, physicians, and rehabilitation programs.

6. All contacts with the EAP and EAP Liaison are kept strictly confidential.

7. Undiagnosed and untreated substance abuse problems, including addictions, do not excuse any employee’s substandard job performance. Any employee’s refusal to seek treatment for alcohol or drug abuse, including addiction, will not be tolerated and is grounds for dismissal.

8. To educate employees on the dangers of drug abuse, the School has established a drug-free awareness program. Periodically, employees will be required to attend training sessions at which the dangers of drug abuse, the School’s policy regarding drugs, the availability of counseling services, and the School’s employee assistance program will be discussed.

Discrimination/Discriminatory Harassment

Responsibility

The Department of Human Resources and all department chairpersons, managers and supervisors shall ensure compliance with this policy. The Associate Vice President of Human Resources is charged with the policies and procedures which prohibit discrimination and discriminatory harassment. Ms. Denise Britt, the Associate Vice President of Human Resources, is located in the Department of Human Resources, Harris Building, 720 Westview Drive, S.W., Atlanta, Georgia 30310-1495. Phone number (404) 752-1600, fax number (404) 752-1639.

Policy

1. In compliance with federal law, including the provision of Title IX of the Education Amendment of 1972 and Section 504 of the Rehabilitation Act, it is the policy of MSM that all employees and students should be able to enjoy and work in an educational environment free from discrimination and discriminatory harassment. Discrimination or discriminatory harassment of any person or group of persons on the basis of race, color, national origin, religion, sex, sexual orientation, age, disability, or veteran’s status is specifically prohibited at MSM. Any

121
person privileged to work or study at MSM who violates this policy, will be subject to disciplinary action up to and including permanent exclusion from the institution.

2. Discriminatory harassment includes conduct (oral, graphic or physical) directed against any person or group of persons because of their race, color, national origin, religion, sex, sexual orientation, age, disability, or veteran status, and that has the purpose of, or reasonably foreseeable effect of, creating an offensive, demeaning, intimidating, or hostile environment for that person or group of persons. Such conduct includes, but is not limited to, objectionable epithets, demeaning depictions or treatment, and threatened or actual abuse or harm.

3. In addition, sexual harassment includes unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature when:

a. submission to such conduct is made either explicitly or implicitly the basis for employment or academic decisions affecting that employee or student; or

b. such conduct has the purpose or effect of unreasonably interfering with an employee’s work performance or a student’s academic performance or creating an intimidating, hostile, or offensive employment, education, or working environment.

4. All members of the institution’s Senior Staff Department Chairpersons, Department Heads, Faculty and supervisors at all levels should take appropriate steps to disseminate this policy statement and to inform employees and students of procedures for lodging complaints. All members of the faculty, staff and student body are expected to assist in implementing this policy.

5. Any employee or student with a complaint of discrimination or discriminatory harassment should contact MSM’s Discrimination Grievance Officer (DGO)) or the Vice President for Human Resources or Director of Student Counseling to obtain information on the procedure for handling such complaints.

“Morehouse School of Medicine is committed to providing academic and employment environments that are free from unlawful discrimination, including harassment, on the basis of protected characteristics, including race, color, national or ethnic origin, sex, age, disability, religion, veteran status, sexual orientation, genetic information, gender identity, or any other characteristic protected by applicable law in the administration of the School’s programs and activities. As such, MSM admits or hires qualified persons of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available at the School. MSM also prohibits retaliation against members of the MSM community raising concerns about discrimination and harassment”.

Please see the Morehouse School of Medicine Nondiscrimination and Anti-Harassment Policy for a more in depth discussion of the School’s nondiscrimination, anti-harassment and anti-retaliation policies and grievance procedures.
Disability Antidiscrimination Policy for Programs and Services

It is the policy of Morehouse School of Medicine to ensure that all institutional goods, services, facilities, privileges, advantages, and accommodations are meaningfully accessible to qualified persons with disabilities in accordance with the Americans with Disabilities Act (ADA) of 1990, Section 504 of the Rehabilitation Act of 1973, and other pertinent federal, state, and local disability anti-discrimination laws.

Student Health Services

Morehouse Medical Associates (MMA) offers off-campus comprehensive medical care to students. The SEHS-IC (Student Health Services-Infection Control) offers general comprehensive medical care, acute primary health care services and services in Infection Control and Immunizations at the Clinical Research Center on the Westview campus on Tuesday and Thursday afternoons. For more comprehensive evaluations and labs, services are available at the Comprehensive Family Healthcare Center in East Point. Additional information on Student Health Services is contained in the student handbook and can be obtained from the Office of Student Affairs. Regularly enrolled MSM students with valid ID cards and health insurance are eligible for healthcare at the Student Health Services Center at MMA, located at 75 Piedmont Avenue, Atlanta, Georgia.

Counseling Services

The Counseling Services staff is available to offer assistance with a variety of personal and academic problems. The Counseling Services Center offers a variety of services designed to help students maximize their potential while at MSM. All students are encouraged to talk over any issue or concern with a staff member. Personal as well as academic counseling is available. Counseling sessions are confidential. Services are available free of charge to all matriculating students, their families, and significant others. Additional information on Counseling Services is contained in the student handbook, which is available from the Office of Student Affairs.

Housing

The School does not have student housing. The Counseling Center provides limited information concerning apartments and rooms that are available in the city.

Student Government Association

Students are represented at MSM through class officers, student organization representatives and student members of committees. Selection of these representatives is done through class elections run entirely by the class involved.

The Student Government Association is the general student representative body. The Constitution for the Student Government Association has been established so that students may
govern themselves more effectively and take a more active part in affairs of the School. The opinions of medical students on curricular and professional matters are actively sought by the faculty. Students serve on several school committees.

**Student Organizations**

Chapters of the following student organizations are active at MSM:
- Student National Medical Association
- American Medical Student Association
- Alpha Omega Alpha Honor Medical Society
- Pre-alumni Association
- American Medical Association Medical Student Section
- Delta Omega Public Health honor Society
- MPH Student Association (MPHSA)

**Awards**

Each year just prior to Commencement, Class Day is held in order to recognize the accomplishments of graduating seniors, faculty, and staff. Superior academic performance by students who have excelled in all academic programs are recognized. These awards include (but are not limited to) the following:

- The President’s Leadership Award is presented to a graduating senior who has demonstrated outstanding accomplishments in leadership and performance.
- The Primary Care Award is presented to the graduating student who most clearly exemplifies the mission of the School.
- Teacher of the Year Awards are presented to faculty based on elections held by second-year students (first- and second-year faculty) and fourth-year students (third- and fourth-year faculty).
- Rising Star Award is presented to a first-year PhD student who has demonstrated outstanding academic accomplishments.
- The PhD Student of the Year award is presented to a fourth-year student who has demonstrated excellence in accomplishments and performance.
- Department awards are given to students on the basis of outstanding academic performance in specific disciplines.
- Awards sponsored by private industry are given to recognize community service, leadership, excellence in basic science and excellence in clinical medicine.

**Alumni Association**

An active national alumni association has been formed to provide a means for the alumni to communicate with one another and to support the institution. Graduates and students who have completed up to two years are eligible for membership.
Summer Experiences

Students are strongly encouraged to augment their curriculum with summer and academic year experiences in clinics (with approved preceptors), in basic science and clinical research with faculty, and at government agencies. Many have modest stipends to support living expenses. These experiences include, but are not limited to:

- Family practice preceptorships
- NIH summer research internships
- CDC externships
- Research with basic science and clinical faculty

The Office of Admissions and Student Affairs will assist students in identifying programs.
Graduate Medical Education

Graduate Medical Education, as the next educational phase after medical school, is an integral component of the Morehouse School of Medicine (MSM) medical education program continuum. It is goal-centered in the school’s strategic plan. MSM is the sponsor of seven (7) residency programs accredited by the Accreditation Council for Graduate Medical Education (ACGME) and must ensure the educational quality within each of these programs. MSM is committed to providing an optimal educational and scholarly environment for residents, with teaching and supervision by MSM faculty.

Residents are Physicians and Students

The Accreditation Council for Graduate Medical Education (ACGME) accredits all residency education programs in the United States. The council and institutions participating in graduate medical education (residency education) follow certain principles. Accreditation standards emphasize the importance of the education setting residents are placed in. As the sponsor of residency programs, MSM follows the Institutional Requirements of the Accreditation Council for Graduate Medical Education (ACGME). The responsibility for monitoring residency education at MSM belongs to the Graduate Medical Education Committee (GMEC). Each residency program, under the leadership of the program director, follows the standards within the ACGME program requirements for its specialty.

Resident Eligibility and Selection

MSM residency programs participate in the National Resident Matching Program (NRMP) for applicants for the first Post-Graduate Year (PGY). These residency programs and positions are listed in the AMA Graduate Medical Education Directory and the Fellowship and Residency Electronic Interactive Database Access System (FREIDA). MSM residency programs use the Electronics Residency Application Service (ERAS) to process applications to their programs. All organizations addressed in this section are web-based and have excellent information on their programs and services on the internet. They may be accessed through the MSM Residency Education Page on the MSM website.

The Resident and MSM Educational Environment

Morehouse School of Medicine offers a full educational milieu designed to prepare the resident for future responsibilities and opportunities. The medical school mission is incorporated into the curriculum of each residency program, and MSM residency programs objectively prepare residents for the community environment in which they will practice. Further, our residents are expected to become leaders in this environment during and after the completion of the program.
We are proud of the fact that results transcend rhetoric in our placement of physicians in underserved areas. Seventy percent of our residency program graduates have pursued general specialty practice. There is also an increase in the number of resident graduates who have shown an interest in teaching medical students and residents. Major objectives of the MSM residency programs are to provide for education, patient care, and scholarly activities. It is strongly emphasized that residents be progressively responsible for the supervision and teaching of medical students and other residents on the service to which they are assigned. Medical students are expected to become a productive member of a team or educational group. Residents are responsible for following the quality assurance guidelines at all assigned facilities. Scholarly activities and the opportunities to investigate are made available to residents in clinical, community, and basic science settings.
Residency Education Programs

MSM is committed to its history and tradition of leadership in patient centered teaching and service to the underserved. MSM has education affiliates in and around the Atlanta metropolitan area that provide ample hands-on learning experiences with the teaching support of an award-winning faculty.

Morehouse School of Medicine is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians. The Committee on Extended Professional Education (EPE), established by the Academic Policy Council of MSM, provides a program that supports healthcare professional’s commitment to lifelong learning and practice improvement.

The purpose of the Office of EPE is to collaborate with MSM faculty, clinical departments and community to identify educational needs of healthcare professionals and then develop and implement continuing education activities through which these needs can be addressed. Continuing education offerings are delivered using a variety of formats such as seminars, regional, national and international conferences and symposia, short courses, online activities and regularly scheduled series (Grand Rounds). The primary target audience for these activities includes MSM clinical faculty, community and other physicians, residents, nurses, allied health professionals, and medical students.

The EPE office collaborates with other agencies that sponsor quality continuing education but are not accredited as Continuing Medical Education (CME) providers. For program and additional information please contact the Office of Extended Professional Education at (404) 752-1954 or email the office at CMEmail@msm.edu
Associate Dean for Faculty Development  Erika Brown, Ph.D.
Director of Faculty Affairs  Sandra E. Watson, MHA
Manager of Faculty Records  Alicia Gibbs
Faculty Records Assistant  Renee Dunbar-Scott
Faculty Development Program Coordinator  Alicia Holloway

OVERVIEW

Office of Faculty Affairs and Development (OFAD) has as its primary goal, to provide resource support for faculty with respect to their professional careers at MSM. The office seeks to ensure fair and consistent treatment of faculty, and to assist academic departments in recruitment, orientation, career development, promotion and retention of faculty and scholars. This office also provides oversight, advice and assistance for the processing of all faculty personnel matters, including the establishment, integration and implementation of personnel policies and procedures.
The mission of the Satcher Health Leadership Institute is to develop a diverse group of exceptional health leaders, advance and support comprehensive health system strategies, and actively promote policies and practices that will reduce and ultimately eliminate disparities in health. The Institute is dedicated to the development of leaders in medicine and public health, representing diversity in race, ethnicity, gender, geographic region, nationality, disability, and professional discipline. It will focus on developing best practices, improving public health infrastructure, and reducing health disparities, which the Health Resources and Services Administration defines as “population-specific differences in the presence of disease, health outcomes, or access to health care.”

CENTER OF EXCELLENCE FOR SEXUAL HEALTH

The Center of Excellence for Sexual Health (CESH) in the Satcher Health Leadership Institute at Morehouse School of Medicine (SHLI/MSM) seeks to raise the level of national dialogue on human sexuality, sexual health and well being in a sustained, informed, honest, mature and respectful way and link that dialogue to actions that reflect both scientific evidence and deeply held beliefs. These actions include preparing the next generation of community leaders in sexual health, encouraging inclusion of people with disabilities and chronic conditions in sexual health discourse, integrating sexuality into medical and religious education and building bridges to improve sexual health in America. CESH assists leaders of divergent viewpoints in building agreements on controversial issues regarding sexual health to strengthen sexual health through public health and improve the sexual health of the American people.
