

Enterprise Mobility Management (EMM) Solution

Morehouse School of Medicine will be implementing an Enterprise Mobility Management (EMM) system to help manage the mobile devices that are being used to synchronize data with the MSM email system. The name of the product is **MaaS360 by Fiberlink**, an IBM company. Use of this application will enable MSM to comply with industry regulations and reduce the risks associated with lost or stolen devices by providing a means to erase MSM content from the device. MaaS360 also allows MSM to set basic security policies on participating devices to restrict unauthorized access. Both Android and iOS (Apple) devices are supported.

Once deployed, enrollment into this system will be required in order to synchronize MSM mail, contacts and calendar information to a personal or MSM issued device. Users will be provided with a customized link that will walk them through the process of enrolling. Once enrolled, users will access their email, contact and calendar information through the Maas360 app.

Enrollment for Maas360 will begin April 13th and continue through April 24th. At the end of the enrollment period, the traditional method of accessing your MSM mail, contact and calendar information from your personal device will be disabled.

Enrollment instructions are forthcoming.
