

DR. ROLAND WELMAKER, SR. SELECTED FOR GEORGIA BIOMEDICAL INFORMATICS COURSE

The Morehouse School of Medicine Library is pleased to announce that Dr. Roland Welmaker, Sr., has been accepted into the prestigious National Library of Medicine (NLM) Biomedical Informatics Course, to be held in Brasstown Valley later this year. This very selective program singles out individuals primed to be potential agents of change within their organizations, immersing them in a week-long experience in biomedical informatics. The vision is to empower them through informatics, that they might assist in solving the current healthcare challenges we all face. Attendees leave with a new set of skills, experiences, concepts and a personal network of nationally known bioinformatics educators and thought leaders.

The Georgia Biomedical Informatics Course, previously renowned for being hosted by the Marine Biological Laboratory in Woods Hole, Massachusetts, was moved to Georgia under a \$1.7 million NLM contract awarded to the Robert B. Greenblatt, M.D. Library of Georgia Regents University.
