

Morehouse School of Medicine General Surgery and OBGYN Robotic Training

On October 5th, Morehouse School of Medicine general surgery and OBGYN residents commenced robotic surgical training with the da Vinci robot at the Intuitive Surgical training facility in Norcross, GA. This training comprised of training on bedside assistance, docking, emergency procedures, instrument exchanges, troubleshooting and first assistant skills. These residents have also completed all required robotic modules and achieved the certificate demonstrating this proficiency.

This was indeed an exciting time as we anticipate the implementation of robotic surgery at Grady Hospital. The residents will continue to train with the robotic system with the overall goal of achieving full robotic surgical certification in the very near future.
