As critic Mike LaSalle of the San Francisco Chronicle says: "45 Years is very much an English film and in the best sense. It's subtle, understated and ultimately devastating, but only if you're paying attention.... [Y]ou will be rewarded with an extraordinary dissection of a marriage, a remarkable iceberg of a film that shows just enough to imply the whole." In addition to trying to get at what really happened, it raises some interesting questions for discussion: How well do you really know another person, even when you've been married for 45 years? And how can you go on, once you know something shocking that you didn't know before?
